Brooke Rollins marks impactful first year as U.S. Agriculture Secretary

WASHINGTON, D.C. — Since taking office, U.S. Secretary of Agriculture Brooke L. Rollins has advanced a broad agenda aimed at improving public health, strengthening food access, and modernizing federal nutrition programs, while supporting American farmers and rural communities.

One of Rollins' most visible accomplishments is the release of the Dietary Guidelines for Americans, 2025–2030, developed jointly by the U.S. Department of Agriculture and the Department of Health and Human Services. The updated guidelines emphasize "real food," prioritizing whole, nutrient-dense options such as proteins, dairy, fruits, vegetables, whole grains, and healthy fats. USDA analysis shows healthy meals can be prepared for as little as \$3 per serving, reinforcing the administration's focus on affordability and flexibility rather than rigid dietary mandates.

Rollins has also overseen major reforms to the Supplemental Nutrition Assistance Program (SNAP). Under new USDA stocking standards, more than 250,000 SNAP-authorized retailers will soon be required to carry more than twice the amount of nutrient-dense foods, dramatically expanding access to healthier options for low-income families nationwide.

Public education and transparency have been another priority. The launch of RealFood.gov and a redesigned food pyramid provide families with practical tools, including shopping lists, menu ideas, and resources tailored to different lifestyles and cultural preferences. The site is expected to expand with additional family-oriented guidance.

Beyond retail grocery access, Rollins has moved to align federal feeding programs with the new dietary

U.S. Ag Secretary Brooke Rollins visited Gallrein Farms in Shelbyville, Kentucky where she accepted a certificate naming her Honorary Commissioner of Agriculture for Kentucky from Ag Commissioner Jonathan Shell. Rollins met with local farmers to discuss key agricultural issues.

Photo via USDA

guidelines. Programs such as school meals and the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) are being updated, influencing nearly \$380 million in daily USDA nutrition spending.

Rollins has also encouraged states to adopt the new guidelines in local nutrition initiatives, calling them an investment in community health, rural economies, and America's farm families. Her tenure has focused on pairing improved nutrition outcomes with economic opportunity, reinforcing her message that better health begins on the plate — and should be within reach for every American household.

Investing in Grain Bins Now: Choosing the Right Partner Matters More Than Ever

By Laurna Todd
Farmers' Quarterly Writer

As this year's season approaches, farmers should consider more than just price when investing in grain bins. A high-quality grain bin can protect your harvest, maintain its value, and ensure your operation runs smoothly—but selecting the right company and dealer can be just as critical as choosing the bin itself.

"Many dealers have the capability to sell a bin, but the question is—do they want to be there for you after the sale?" says Jason Workman, owner of Workman Bins Inc. "Too often, dealers are focused on one-and-done sales. Farmers need partners who will help with installation, service, and ongoing support."

With the economy as unpredictable as current crop markets, farmers cannot afford downtime or frequent equipment breakdowns. Knowing your dealer will be there to respond promptly can make all the difference when timing is critical during harvest.

Workman Bins Inc prides itself on

Jason Workman
Workman Bins
Mayfield, KY

going "beyond the sale." Jason Workman emphasizes long-term relationships, saying, "We want to be part of the farm's generation-to-generation story. I make it a priority to know our customers, their families, and their equipment—so we can provide the right solutions, even if they don't know exactly what they need."

For farmers seeking reliable grain storage, choosing a reputable bin manufacturer is equally important. GSI is a leading name in grain bins, known for durability, innovative designs, and nationwide support. "When you invest in a GSI bin through a company like Workman Bins, you're not just buying equipment—you're investing in peace of mind and long-term productivity," Workman says.

As harvest season approaches, stop in and talk with Jason or William anytime. Partnering with a trusted dealer who understands your farm, provides ongoing service, and works with leading manufacturers like GSI can ensure your operation runs efficiently today and for years to come.

Hendricks Farms receives 2026 University of Kentucky Grain Crops Science Service Award

By Jordan Strickler

LEXINGTON, Ky.—Hendricks Farms, an eighth-generation family farm in Logan County, received the 2026 University of Kentucky Grain Crops Science Service Award during this year's UK Winter Wheat Meeting. The award recognizes Hendricks Farms for their work assisting the Martin-Gatton College of Agriculture, Food and Environment's Weed Science Program.

The UK Grain Crops Science Service Award honors those who help the UK Grain Crops Science Group (GCSG) carry out research that supports the state's farmers. Each year, the award highlights cooperation that gives researchers a real-world place to test ideas, collect data and move work from a plan on paper to results in the field.

For the past four crop years, Hendricks Farms has served as a working site for the Weed Science Program as it studies harvest weed seed control for Italian ryegrass in wheat. Hendricks Farms and Martin-Gatton CAFE specialists installed and studied a Redekop Seed Control Unit on the farm's combine to see how it affects ryegrass seed survival at wheat harvest.

"I've always felt like we can't keep doing the same thing and expect different results," said Adam Hendricks. "Italian ryegrass is a real issue in our wheat rotation, so I was interested in anything that might help. If nobody steps up and tries something new, then we'll never really know what works."

Hendricks Farms also agreed to give up multiple acres each season so Italian ryegrass can remain in a designated area of a field. That sacrifice allows GCSG researchers to test equipment and methods under real conditions. The work required Hendricks to also volunteer hours during harvest so the equipment could be used and evaluated in a way that produces reliable data.

"The Hendricks family sacrifices multiple acres each year for our research," said associate

Extension professor of weed science Travis Legleiter. "Additionally, they provide their precious hours during wheat harvest to allow this work to be conducted. Without their help, the Weed Science program would not have been able to conduct this valuable non-chemical weed control research."

This is not the first time that the family has been rewarded for their work. In 2018, they were given the honor of Farm of the Year from the Logan County Farm Bureau. Additionally, Adam, his brother Jason and cousin Harry were given Young Farmer of Excellence awards. In 2024, the

Logan County Conservation District awarded the farm the Master Conservationist Award.

"On our farm, you can't just pause harvest and come back later when it's convenient," Hendricks said. "So when Travis and his team need time to run the equipment and collect data, we build that into the day. We're proud to give them a real-world setting to test it, because that's how you get answers that actually apply. It takes patience, but it's worth it."

Kentucky Soybean Board SoyFoam cost-share grant promotes soy, aids first responders

SoyFoam™ TF 1122 is the first and only GreenScreen Certified Gold Fire Foam.

Through their soy checkoff and the United Soybean Board, U.S. soybean farmers have supported much of the extensive testing of SoyFoam's environmental and performance benefits for use as a safer firefighting foam.

SoyFoam™ TF 1122 is the first and only GreenScreen Certified Gold Fire Foam. GreenScreen Certified, owned by the non-profit Clean Production Action, is an independent, certification program

that promotes the use of PFAS-free and preferred chemicals in materials, products, and manufacturing.

SoyFoam™ TF 1122 extinguishes and controls fires safely while removing harmful chemicals, ensuring a secure foam blanket that is safe to touch.

SoyFoam™ TF 1122 is proudly 100% free of fluorines and intentionally added PFAS (per- and polyfluoroalkyl substances), ensuring a safer and more sustainable firefighting solution.

Firefighting SoyFoam is 100% free

of intentionally added per- and polyfluoroalkyl substances (PFAS), commonly called "forever chemicals."

There are also no detectable fluorines (less than 1 parts per billion) in the composition of the foam concentrate. EPA

reports PFAS are found in water, air, fish, and soil at locations across the nation and the globe.

Since the 1950s, PFAS were used to put out fires, repel oil and water, reduce friction and more in a wide range of products. They can leak into the environment where they are made, used, disposed of, or spilled. Exposure is linked to several adverse health effects including certain cancers, thyroid dysfunction, changes in cholesterol, and small reductions in birth weight. As a result, governments are prohibiting firefighting foams that contain intentionally added PFAS.

SoyFoam is made with U.S.-grown soy flour and is safer for our first responders AND the environment. It is compatible with existing foam inductors and aerating nozzles so it does not require staffing changes to a fire department's existing standard operation procedure for Class A and Class B fires. Cross Plains Solutions' SoyFoam meets the firefighting foam requirements as specified in NFPA 18, the National Fire Protection Association's standard for wetting agents. It is available in common firefighting supply options, such as 5-gallon pails, 55-gallon drums and 250-gallon and larger totes.

"We believe in this product, and we want to support our local first responders," said KSPB Chairman Fred

L. Sipes. "The PFAS in older formulations are proven harmful to our firefighters' health and to the environment, and this is a way to not only assist our first responders and also promote yet another soy-based soy-based innovation. I am proud to support this product and a farmer-led program that gets it into the hands of our rural volunteer firefighters."

Rural Fire Departments may participate in this program by contacting Penny at Cross Plains Solutions (phicks@CrossPlainsSolutions.com). This is a reimbursement program, so matches

must be supported by an invoice and proof of purchase. Rural departments are eligible for up to \$1,000 as a one-time 50 percent reimbursement. Funding is limited, and the program is first-come, first-served for rural Kentucky volunteer fire departments only. Program runs until December 31, 2026, or when allocated funds are exhausted.

To learn more about SoyFoam, visit CrossPlainsSolutions.com. For specific inquiries about this program, email info@kysoy.org.

SIC hosts Section 25 Ag Technology Day

HARRISBURG, Ill. — Southeastern Illinois College recently welcomed Section 25 agriculture instructors and Section 25 FFA officers to campus for an Ag Technology Day highlighting recent upgrades to the college's agriculture and career and technical education programs.

During the visit, participants toured SIC's Career and Technical Education labs, including diesel

technology, heavy equipment, welding, and powersports. Demonstrations featured a Switch electric vehicle, a satellite-guided John Deere tractor, an electric wheel loader, and EV training boards used to teach modern electrical and vehicle systems.

The visit provided instructors and student leaders with an opportunity to see how SIC is incorporating new technologies into its

programs to better align training with workforce needs across agriculture, transportation, and skilled trades.

"Electric and advanced technologies are becoming more common across agriculture, transportation, and equipment industries," said Robbie Lindhorst, SIC Diesel Technology Instructor. "By integrating EV systems, modern diagnostics, and

SIC Diesel Technology Instructor Chris Jones discusses modern precision agriculture systems while demonstrating a satellite-guided John Deere tractor during an Ag Technology Day visit at Southeastern Illinois College.

hands-on training into our classrooms, we're helping students graduate with the skills employers are already looking for, while still building a strong foundation in traditional diesel and mechanical systems."

Through the Taking Back the Trades and REV Up grants, Southeastern Illinois College has invested more than \$750,000 in new equipment and training technology. These investments support hands-on learning and help prepare students for careers across SIC's Career and Technical Education programs.

Activities like Ag Technology Day strengthen

connections between high school agriculture programs and postsecondary training, while giving instructors and students a firsthand look at career pathways available through SIC's Career and Technical

Education programs. For more information about career and technical education programs at Southeastern Illinois College, visit sic.edu/cte or contact an advisor at advising@sic.edu or 618-252-5400, etc. 4130.

Ethan Ford of Ozark, an SIC Diesel Technology student, demonstrates electric vehicle components using a Switch electric vehicle during an Ag Technology Day visit at Southeastern Illinois College.

Cultivating agriculture innovation

The agricultural sector is evolving thanks to new technology necessitated by a growing global population and the pressures of climate change. The United Nations predicts a global population of 9.7 billion by 2050. The agricultural sector must figure out a way to meet the demands of that expanding population. These challenges are being offset by advancing technologies that are helping farmers increase productivity while also reducing their ecological impact.

Technological advancements are cultivating innovation within the agricultural sector, and these are some of the options farmers are exploring.

• The internet of

things (IoT): IoT is a vast network of objects embedded with sensors, software and connectivity. Farm operations can use low-cost, high-durability sensors deployed across fields to monitor soil moisture, temperature and nutrient levels in real time. These sensors allow for "variable rate application" of water and fertilizers, ensuring resources are directed only where they are needed. A report by Grand View Research says the smart agriculture market is expected to grow at a compounded annual growth rate of 10.8 percent through 2030.

• Robotics and automation: Labor shortages have led to a growing reliance on robotics and autonomous

machinery to handle farm work. Modern tractors can be equipped with GPS and LiDAR (light detection and ranging) systems to operate autonomously. Optimized pathfinding helps to reduce soil compaction and more. Specialized robots are capable of selective harvesting, says the Journal of Field Robotics. Fruit pickers can evaluate the ripeness of produce before picking it, minimizing waste. Unmanned aerial vehicles or drones can offer multispectral imagery that enables farmers to identify crop stress before it is visible to people.

• Biotechnology: Farming increasingly

see INNOVATION,
page A7

The foundations of sustainable farming

The agricultural sector is built on plants and animal life, but the industry can still affect the environment in ways that contribute to the ill effects of climate change. According to data published in a 2022 report from McKinsey & Company, agriculture accounts for nearly one-quarter of global emissions, and was identified as the industry that contributes the most to exceeding planetary boundaries. Sustainable farming practices can help reduce that impact.

Even though there is growing consumer demand for more environmentally friendly products, farmers in the United States are lagging behind when it comes to adopting sustainable practices, even though they are aware of them. McKinsey reports that 90 percent of U.S. farmers have an understanding of sustainable farming, but adoption of these practices remains low. Here's a look at some of the sustainable farming practices and what the agricultural sector can do to foster a better planet.

Regenerative techniques

Healthy soil often equates to a healthy planet. The cornerstone of sustainability lies in the soil. The soil serves as a carbon sink and a water

filtration system. By avoiding traditional "tilling" farming, farmers can maintain the soil structure. This will reduce erosion and keep carbon sequestered in the ground. Farmers can plant cover crops like rye or clover in the offseason to prevent soil erosion, suppress weeds and increase the organic matter of the soil. Diversifying species planted in fields will break pest cycles and naturally replenish soil nutrients over time. This can reduce the need for chemical fertilizers and pesticides.

Efficient irrigation

Global water scarcity continues to be a concern, and sustainable farms will prioritize water stewardship. In utilizing drip irrigation, which delivers water directly to a plant's roots, farmers can reduce evaporation and runoff when compared to overhead sprinklers. Collecting and storing rainwater runoff for use during drought can minimize the strain on local aquifers.

Biological pest controls

Farmers can rely on the use of integrated pest management strategies to offset chemical pesticide use. By introducing natural predators, farmers can control

certain pest populations. For example, ladybugs can reduce aphids on plants. Relying on traps to collect pests also can slow pest outbreaks and reduce reliance on chemicals.

Creating fertilizers

Farmers can use the waste produced on their farms by turning it into valuable fertilizer. According to the USDA, biochar is a black carbon produced from biomass sources like wood chips, plant residues, manure, and other agricultural waste in a low-oxygen environment through a process known as pyrolysis. This material can be used as a soil amendment to improve water retention, nutrient uptake and fertility. Chicken litter, bone meal, blood meal, and compost tea are examples of farm waste-derived products that can be used as fertilizers.

Sustainable farming is a step toward the future that protects the land without compromising output.

INNOVATION, from page A6

is being developed in the lab before crops even sprout in the fields. Biotechnology is a pillar of agricultural evolution. Gene-editing tools like CRISPR-Cas9 can develop crop varieties that are more resilient to saline soil conditions and drought. Research published in *Nature Communications* says that bio-engineered crops have the potential to increase yields by up to 20 percent, even in suboptimal environments. This cuts down the time

required to create traits that help plants thrive.

• Vertical farming: Vertical farming enables facilities to produce more food per square foot than traditional farming, according to the Association for Vertical Farming. When coupling this with Controlled

Environment Agriculture, which employs hydroponic or aeroponic systems, facilities have greater control over conditions that can affect food sources.

The utilization of different technologies across the agricultural sector is driving innovation and production.

Four careers in modern agriculture

Farming and ranching may be the first roles people think of when they envision jobs in agriculture. But the modern agricultural sector offers a much wider range of career paths as well. As technology, sustainability and consumer demand impacts the industry, a greater number of unique and innovative career paths have emerged and opened doors for people with a wide range of skills.

According to the United States government and industry projections, the agricultural and food sectors supported about 22.1 million jobs in 2022, and growth is expected. Those exploring agriculture as a possible career field can look to these unique roles.

Precision agriculture specialist

A precision agriculture specialist

is an emerging and dynamic role in the field. These professionals apply data analytics, GPS, sensor technology, and drone usage to optimize crop yields and input use. According to data reported by Zipdo, use of digital devices, AI and other tools in farming has surged. Digital tool use has risen by roughly 50 percent in the last five years, and drone technology adoption grew by 48 percent between 2019 and 2023. Estimates suggest that precision agriculture will expand robustly through the latter half of the decade, and individuals guiding this expansion will be in demand.

Sustainability consultants

Agriculture sustainability consultants also are important to modern farming. These professionals are

responsible for advising farms and agribusinesses on eco-friendly practices. These may include soil conservation, water management, carbon sequestration, and regenerative agriculture. In addition, animal welfare and livestock technology specialists improve animal health and support ethical and sustainable farming

practices. The Bureau of Labor Statistics says agriculture and food scientists working in science and sustainability are projected to see employment opportunities grow by about 6 percent between 2024 and 2034, which is faster than the average for all U.S. occupations.

Digital marketing

Careers in digital

marketing and agricultural communications also are gaining traction, with consumers increasingly being interested in where their food comes from. Agricultural businesses need storytellers, social media managers and content creators to share engaging and transparent narratives about the innovative efforts

taking place on their farms.

Agricultural entrepreneurs

Entrepreneurs, known as "agripreneurs" within the industry, are the go-getters who are helping to redefine the agricultural sector. These people develop plant-based products or ag-tech startups, combining creativity with agricultural knowledge and business development. The U.S. Chamber of Commerce says the agriculture and food industries contributed \$1.53 trillion to the U.S. economy in 2023, and agripreneurs are a rising part of that equation who are fueling innovation.

Careers in agriculture are diverse and profitable. There are many paths individuals can take to contribute to this vital industry.

Facing rising costs, farmers focus on the future

By Laurna Todd
FQ Writer

The 2026 Winter Ag Conference brought farmers, FFA members, and agricultural professionals together in Graves County on Feb. 6 for a day of networking, education, and discussion about the challenges facing today's farm economy.

Key topics included rising input expenses, trade pressures, and the aging population of American farmers. Speakers provided insight into current market conditions, equipment trends, and the financial outlook for producers. While some costs such as fuel, feed, and interest rates may begin to stabilize, overall production expenses remain a major concern for many operations.

Equipment values

were highlighted as a continuing pressure point, with higher prices influencing farmers to hold onto machinery longer and rely more heavily on the used market. Industry observers noted this trend could eventually tighten the availability of quality used equipment.

High input costs continue to strain profitability nationwide. Expenses for seed, fertilizer, fuel, labor, and interest have all climbed significantly in recent years, creating difficult financial conditions even for efficient, well-established farms. Local producers acknowledged that maintaining margins in the current environment is one of the toughest challenges they have faced.

The conference also

Keith Lowry stands with local FFA students at the Winter Ag Conference hosted at Lowry Farms in Graves County, which drew a crowd of more than 100 attendees.

addressed long-term concerns about the future of farming. With the average farmer nearing retirement age, barriers such as access to land, capital, and affordable housing make it difficult for young producers to enter the industry. Even so,

leaders emphasized that agriculture still offers strong opportunities through technology, business innovation, and diversified career paths.

Two local FFA chapters—Graves County and Murray High Schools—were represented at the

conference, where students connected with producers, explored current industry trends, and attended a keynote presentation focused on agricultural equipment markets.

Organizers reported a strong turnout and positive community response, highlighting

the value of bringing farmers and agribusiness leaders together. Despite ongoing challenges, the overall message remained clear: the agricultural community continues to adapt, support one another, and remain committed to the future of farming.

How STEM powers modern agriculture

The image of farmers clad in flannel shirts while livestock pull plows through the fields may still be foremost on the minds of individuals asked to imagine farm life. But such images may no longer reflect an industry increasingly governed by advanced technology.

Even small-scale family farms have recognized the advantages of embracing technology to help make their operations more efficient and successful. Manual plows and tractors largely have been replaced by fleets of autonomous machines and precision farming technology.

Experts agree that the evolution of modern farming is a case study in the application of Science, Technology, Engineering, and

Mathematics. STEM is helping to address the problem of global food security and widespread climate change. U.S. News & World Report says 27 percent of new high-skills jobs in agriculture will require a STEM education. There are many ways STEM is utilized within the agricultural sector.

• Genomics and biotechnology: Scientists can now identify specific traits in plant DNA that will allow for more drought-resistant crops or those better equipped to tolerate problems like downy mildew. Other traits may make plants more capable of thriving in saline soils. Soil science also enables farmers to learn more about the complex microbiome of the soil, which ultimately can help to maximize nutrient

uptake.

• Precision agriculture: STEM is a force behind precision agriculture, which the United States Department of Agriculture says is a term to describe farming based on observing, measuring and responding to within-field variability through crop management. Precision farming utilizes remote sensing from satellites and drones, sensors embedded in the soil or devices worn by livestock to provide real-time data. AI tools also are used to predict harvest yields and optimize fertilization and irrigation.

• Robotics: Automation and robotics fills a void

SERVICE DEPARTMENT OPEN SATURDAYS 9:00AM-3:00PM

Turning passion into reality:

A student's calling to advocate, communicate and serve is coming to life through an agricultural communications internship at the University of Kentucky.

By Jacob Rudy

LEXINGTON, Ky.— Though he grew up on a family farm, Jacob Rudy's calling to agriculture came much later. Now a sophomore at the University of Kentucky, Rudy's journey has evolved from looking at agriculture as "just a job" to discovering a passion for agricultural advocacy and leadership.

Rudy grew up in Daviess County, where agriculture and farming were a daily occurrence rather than a long-term career goal. While farming played a central role in his upbringing, he initially viewed it as a task to be done, not something that would define his future.

"When you grow up on a farm, it becomes normal, almost routine," Rudy said. "For a long time, I didn't understand how impactful this industry really was. I thought it was just a job, but now I know it means so

much more — especially here in Kentucky."

Rudy's perspective began to change once he joined his local FFA chapter, following in his dad's footsteps. Rudy held several leadership positions before serving as a Kentucky FFA State Officer. During that year, he was exposed to the broader impact of agriculture beyond a farm gate.

"Serving as a Kentucky FFA Officer completely changed the way I viewed agriculture," Rudy said. "It showed me that agriculture is not just row crops. It's people, policy, education and advocacy. Because of this, I eventually realized I didn't just want to work in agriculture. I wanted to fight for it."

That realization sparked Rudy's passion for advocacy and heavily influenced his academic path. After his year as a State FFA Officer, Rudy found himself mentioning

Jacob Rudy at the UK Gatton Student Center on campus. Picture by Brian Volland.

Photo by Brian Volland

agriculture in every conversation he had. Whether it was with a classmate in his economics course or with a fellow member of the Student Government Association, that's all he wanted to talk about, and one day it dawned upon him.

"I wasn't meant to be a direct part of the agricultural industry;

my purpose is to help people understand and appreciate it," Rudy said.

While enrolled in the agricultural education and advocacy program, part of the Community and Leadership Development Program, Rudy recognized the importance of communication in strengthening agriculture's voice. He quickly became interested in storytelling and media, and believes they are tools that will educate the public, create a positive perception and amplify the voices of agriculture.

That led him to pursue an internship with the Martin-Gatton

College of Agriculture, Food and Environment Marketing and Agricultural Communications Department, contributing to news stories, event coverage and multimedia production that highlight the work of the college and Kentucky's agricultural community.

"This internship will give me a unique opportunity to serve agriculture," Rudy said. "Instead of being the one in the spotlight, I'm helping to tell the stories that deserve to be heard."

Through this position, Rudy will have the opportunity to engage with faculty, students and industry leaders — further expanding his understanding of agriculture's landscape.

"This is just one of the many ways this

college will help develop me into a contributing member of our industry and prepare me for what's next," Rudy said.

Looking ahead, Rudy hopes to continue building a career centered on advocacy and public service. Whether through agricultural communications, policy work, or leadership roles, he remains committed to representing the industry that shaped his upbringing and values.

"I started on a farm thinking agriculture was just work," Rudy said. "Now I know it is my calling. This internship is helping me take the next step toward serving this industry for the rest of my life."

To learn more about our students at Martin-Gatton CAFE, visit <https://students.ca.uky.edu>

Jacob Rudy as a young child (middle) working with his dad and sister on the family farm in Daviess County.

MJ Leighton, Auctioneer • TN Lic#6939

STEM,
from page A11

created by human worker shortages. Agricultural engineers help design machinery or focus on the physical infrastructure of the farm. Engineers also are the minds behind innovative farming practices like vertical farming and controlled environment agriculture, which encompasses hydroponic and aeroponic systems.

- Mathematical analysis: Math is vital in the agricultural sector. Statistics, predictive modeling, accounting, and risk management, are types of mathematical analysis employed to forecast global food supplies and profits.

The link between STEM and agriculture is undeniable.

STEM is an important driver of the industry and only stands to gain influence in the years to come.

The effects of soil degradation

Soil degradation is an environmental concern that occurs when land becomes less fit for a specific purpose, like crop production. As the soil loses nutrients, namely phosphorous, nitrogen and potassium, crop yields can decline significantly, compounding the problem of food shortages resulting from a growing global population.

The lack of a strong foundation to grow food and other plants is just one of the problems associated with soil degradation. Here are some additional issues tied to soil degradation.

- **Nutritional decline:** Food grown in over-taxed soil may have a lower nutrient density. This can lead to micronutrient deficiencies in the human population.

- **Farm closures:** When soil erodes too much to support agriculture, farmers may abandon the land

and their operations.

- **Poor infiltration capacity:** Degraded soils are not able to soak up rainwater as effectively as healthy soil. This can lead to water run-off and instances of flash floods. In arid locations, extreme degradation can lead to desertification, which occurs when land is unable to support vegetation.

- **Climate change**

triggers: The ocean, forests and soil are the world's largest carbon sinks, according to Client Earth. When soil erodes or is tilled to excess, stored organic carbon can oxidize and release into the atmosphere as carbon dioxide, contributing to climate change. Furthermore, degraded land is not capable of supporting lush vegetation necessary to pull carbon out of the

atmosphere.

- **Global unrest:** As healthy, arable land becomes scarce, the competition for fertile territories can lead to local and international conflict. Food scarcity also contributes to higher prices on products across the world.

Soil degradation can produce a trickle-down effect that affects people from all walks of life.

BOURBON COUNTY FARM EQUIPMENT 2026

SATURDAY, MARCH 7TH @ 9:00 A.M.

TRACTORS | CONSTRUCTION EQUIPMENT | VEHICLES | TRAILERS
FARM EQUIPMENT | MISCELLANEOUS & ESTATE ITEMS

To consign, contact Jay Rankin at 859-983-1486, or Byron Amburgey at 859-398-0279

Note: We will be accepting consignments starting Fri., Feb. 27th through Thur., March 6th, between the hours of 8:00 a.m. - 5:00 p.m. daily. Deliver your items anytime during these hours.

NO CONSIGNMENTS ACCEPTED SALE DAY

COMMISSION RATES: Progressive rates at 10% up to \$1,000 per item, then 7% over \$1,000 per item; \$750 maximum per item; \$25 minimum per item. \$25 no sale fee per item. 5% cost to all buyers

TERMS: Full Payments due on the day of auction. We accept Cash, good check, or credit card with 4% convenience fee day of sale.

Kentucky State sales tax of 6% will be added to those items that are not farm exempt or resale exempt. Buyers that do not have a Kentucky Agriculture Exemption (AE) or a resale exempt will be charged sales tax. Buyers that are out of Kentucky are required to have a Kentucky out of state farm exemption (OAE) as well. This agriculture exemption document may be obtained from the Kentucky Department of Revenue, phone 502-564-5170.

NOTE: All announcements on the day of sale take precedence over all advertisements. Not responsible for accidents, lost or damaged items. All items sell as is where is with no guarantee or warranty actual or implied. Not responsible for no shows. Auction Company is not responsible for price protection of any consigned item.

Failure to pick up does not release the buyer from obligation to pay. Your bid is your contract!

ONLINE ONLY AUCTION

AUCTION ENDS 02/23/26 @ 7 PM | BID NOW

Strayleaf Rd, Wildersville, TN – 35± Acres – Productive Crop Land

This property consists primarily of usable, farmable ground well-suited for row crop production. The land features favorable topography with open fields that allow efficient equipment access and farming operations, making it ideal for owner-operators and farmland investors looking to expand their holdings.

With established field layout and road frontage on Strayleaf Rd, this tract offers easy access for equipment, planting, and harvest. The property also provides strong potential for cash rent income, long-term land appreciation, and continued agricultural use.

Real Estate Terms: purchasing property regardless of post auction contingency or inspections. Pre-inspections encouraged and welcomed at buyers expense. Seller warrants clear title: buyer pays all closing costs including deed. 10% Buyers premium applies to the bid price. 10% Down in cash or check within 24 hours of auction ending and balance due on or before 30 days. Buyer responsible for 2026 taxes.

Integrated Pest Management Virtual Training School set for March 19th

By Jennifer Elwell

LEXINGTON, Ky.—

University of Kentucky Martin-Gatton College of Agriculture, Food and Environment Extension specialists will share the latest integrated pest management (IPM) farming innovations during the 2026 IPM Virtual Training School.

Developed to help Kentucky's grain, forage and produce farmers, this annual one-day virtual workshop takes place March 19, beginning at 8 a.m. CST via Zoom.

"IPM is core to managing our farms for sustainability and financial stability," said Ric Bessin, UK Extension entomologist. "Our leading subject matter specialists will share their latest research addressing core production

challenges, including weed, disease, insect and nutrient management for row crops and specialty crops."

The morning field crop sessions will include presentations on weed control for pastures and grain crops, updated recommendations for corn and wheat disease management, and control of fall armyworm and alfalfa weevil. Other topics include fertilization methods for organic crop production, nutrient management in cropping systems, and best practices for drone applications.

The afternoon horticulture sessions will include presentations on fungicide schedules for tree fruit, advancements in biopesticides, mechanical weed control, fertility management of

vegetable crops, and preparing a greenhouse for a successful growing season.

New to the lineup of topics is wildlife damage, an issue that affects most outdoor crops. Matthew Springer, associate Extension professor of wildlife management in the Department of Forestry and Natural Resources, will present multiple methods to reduce wildlife damage across production systems.

"Wildlife populations can be problematic for producers across Kentucky, with numerous species ranging in size from voles to bears causing issues," Springer said. "This program will help producers understand the legal options they have to help reduce or restrict wildlife damage in their operations, subsequently benefiting their bottom lines."

After each session, attendees will have an opportunity to ask questions. The training also offers continuing education units for commercial pesticide applicators and Certified Crop Advisers.

Online registration is required to participate. For questions or more information, contact Zenaida Viloria at zenaida.viloria@uky.edu or 859-562-1336.

The IPM Virtual Training School will address core production challenges, including weed, disease, insect and wildlife management for row crops and specialty crops.

Farmer Bridge Assistance injects millions into our rural economy

By WAVE River Counties AG Initiative

Ever wonder just how much a USDA program means to our area? The recently announced and underway \$11 billion dollar Farmer Bridge Assistance program is set to bring approximately \$13 million dollars into the WAVE River Counties AG Initiative area and about 26 million into the Purchase Region. See chart below.

(Acreages are based on the most recent Ag Census and are an estimate only)

Quoting our Partnership Luncheon speaker Stephen Vaden .."I took a photo of this chart and sent it directly of Secretary Rollins to show her what impact this program was having on Rural America."

The WAVE area

see ASSISTANCE, page B8

Kentucky farmer leaders to serve on NCGA input Cost Task Force

In response to mounting financial pressure on corn producers, the National Corn Growers Association's (NCGA) Input Cost Task Force is sounding the alarm on the harmful impact that high input costs are having on farmers' profitability.

Economic analysis from NCGA shows that average costs of production have only declined 3 percent between 2022 and 2025, while corn prices have dropped more than 50 percent in that same period. Even with projected stronger yields, most corn growers are still expecting 2026 to be a fourth year of negative returns.

The task force is working to identify practical, short- and

medium-term measures that farmers, industry stakeholders, and policymakers can take to mitigate input cost burdens. The Task Force's objectives are to explore, understand, raise awareness, and provide solutions to address the stubbornly high cost of critical inputs used in corn production that impact farmers' productivity and profitability.

Since the Task Force's formation, policymakers, regulators, and industry partners have taken notice:

NCGA has endorsed Senator Grassley's Fertilizer Research Act, which would result in greater USDA reporting and transparency related to fertilizer market

dynamics and prices.

The Trump Administration announced that it would reduce tariffs on important fertilizer imports.

The Department of the Interior added phosphate and potash to the critical minerals list.

The Senate Judiciary Committee held a hearing on "Competition issues in the seed and fertilizer industries".

USDA signed a memorandum of understanding (MOU) with the Department of Justice to strengthen competition for agricultural inputs.

NCGA worked with House Members on improving a draft letter to USDA and DOJ regarding the inputs and highlighting the role

of antitrust enforcement.

Moving forward, NCGA's input Task Force will continue to evaluate the economics of input supply chains and markets. The Task Force will also explore policy and regulatory solutions to increase supply and competition in input markets.

The Input Cost Task Force is led by Matt Frostic, a Michigan corn farmer and first vice president for NCGA. Herndon, Ky. farmer and NCGA board member Brandon Hunt and Kentucky Corn Executive Director Laura Knoth serve on the task force, along with a cross-section of other farmers, state association staff, and NCGA personnel.

The family farm

Small farms are the lifeblood of rural communities.

According to the Farm Bureau, 97 percent of American farms are owned by families. Small family farms make up the majority of farms nationwide and operate a higher share of acres altogether than any other farm size.

Despite this, small-scale farms are mired in a long-term decline, according to recent U.S. Department of Agriculture reports. Driven by economic pressures, government policies generally are favoring large operations, consolidation and tighter competition.

**Standard Equipment:**

- 600/900 Gallon fuel tank
- 100 Gallon DEF tank
- DEF Pump
- 2" Cast iron pump
- 30' DEF hose and reel
- 30' Fuel hose and reel
- Auto shut off DEF/fuel nozzles
- Storage rack
- Heavy duty powder coated frame
- LED lighting - interior and frame
- Solar charging system
- Electric brakes

Additional Options:

- Air compressor w/50' Air hose and reel
- Premium wheels
- Grey, red, green color options

FUEL TRAILERS**Fuel Pro - Compact Fuel Trailer**

FUEL PRO is the compact, affordable in-field fuel solution you've been waiting for. Built to the same high-quality standards as The Tanker series of fuel trailers, you can rely on Fuel Pro to keep your equipment filled up and running.

- 600 GALLON FUEL CAPACITY (NO DEF TANK)
- 35' FUEL HOSE AND REEL W/AUTO SHUTOFF NOZZLE
- 2" CAST IRON PUMP
- HEAVY DUTY POWDER COATED FRAME
- GREY, RED AND GREEN COLOR OPTIONS

NURSE TRAILERS - 1010

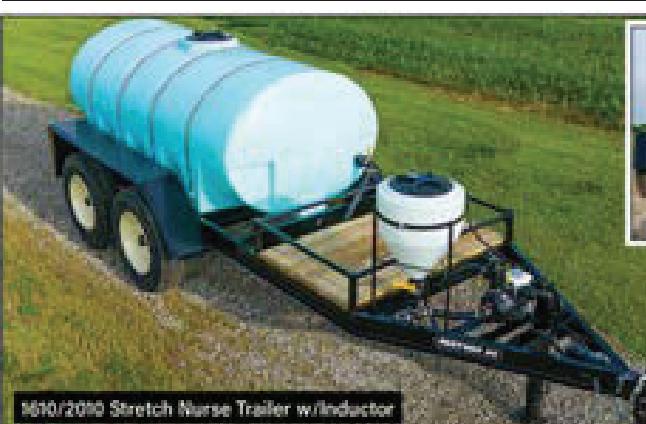

1010 Nurse Trailer w/Inductor and Chem Rack

**1010 Standard Features**

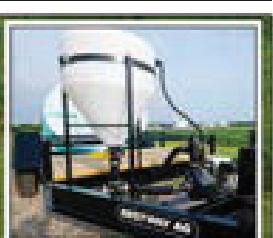

- 1010 UV stabilized full drain leg tank (black, white or light blue)
- Heavy duty powder coated channel frame
- Pump options: poly or cast iron in 2" or 3"
- 11L x 15 (12 ply) implement tires
- Slipper leaf-spring suspension
- Adjustable height clevis hitch
- Two (2) safety chains with hooks
- Two (2) tank access steps
- 2" Or 3" plumbing
- Recirculating plumbing w/quick fill tank, Clean load system

**Additional Options:**

- Electric brakes, Lights, Fenders, Ball Coupler, Pintle Coupler, High speed axles, wheels and tires, Shuttle platform, 15 or 30 gal. mix and fill tank, Clean load system

NURSE TRAILERS - 1620-2010

From soil health to strong markets: Supporting Kentucky Farmers

Kentucky farmers know that no two operations look the same, and neither do their challenges. Markets shift. Input costs rise. And weather keeps you guessing. The Organic Association of Kentucky (OAK) helps producers build farm resilience with practical tools, hands-on education and farmer-to-farmer support. From conventional cattle and row crop farms to certified organic vegetable operations, farmers across Kentucky reduce

off-farm inputs, grow their own fertility and learn the latest production trends with OAK.

Founded by farmers and led by farmers, OAK is a statewide nonprofit focused on advancing diversified agriculture and proven conservation practices that strengthen long-term farm viability. OAK serves producers across commodities and farm scales who are looking to improve soil health, reduce risk, innovate or explore organic market opportunities.

Are you curious about cover cropping, reducing tillage, rotational grazing or

farm diversification? OAK's programs are grounded in real-world experience.

The annual organic farming conference and on-farm field days bring farmers together to share what's working and what's not. One-on-one technical assistance supports production planning, troubleshooting and adopting new practices, while OAK's organic transition services help producers evaluate how organic certification might fit their operations. OAK provides marketing technical assistance, helping farmers better

communicate with buyers and connect to growing market demands.

OAK is a resource for farmers working to build resilience. Healthier soils hold water and nutrients. Diversified markets create stability. Stronger local food systems keep dollars circulating in rural communities. To learn more about OAK's programs and services, visit www.oak-ky.org or reach out at info@oak-ky.org or 502-219-737

Advancements in livestock technology

Consumer demand drives changes in industry, and the agricultural sector is no exception. Consumer demands for improved animal welfare have led to changes in the livestock sector, and various technologies have been developed and are in development to help this particular segment of the agricultural industry thrive.

According to the Animal AgTech Innovation Summit, various startups have developed technologies that can make the livestock industry more sustainable and efficient.

Treatment
The Israeli firm Armenta has developed a non-antibiotic treatment for bovine mastitis that utilizes acoustic pulse technology. The treatment has a 70 percent cure rate.

Another firm working to treat livestock is the United States-based General Probiotics. Animal AgTech reports that General Probiotics develops cellbots and antimicrobial probiotics that eliminate harmful pathogens in livestock. That can reduce dependency on antibiotics and make food production safer.

Welfare
Faromatics, a firm based in Spain, has combined robotics, artificial intelligence and big data to improve animal welfare and farm productivity. One Faromatics product utilizes a robot suspended from a ceiling to monitor certain variables, including equipment function and health and welfare, that affect broiler chickens. The American firm Swinetech utilizes voice recognition and computer vision technology in its SmartGuard product to prevent piglet deaths from crushing and

starvation. The product also makes it possible to track and facilitate obstetrical assistance.

Operations
Based in Uganda, Jaguza Tech has developed a livestock management system that utilizes sensors, data science and machine learning to improve the efficiency, productivity and sustainability of modern farm operations. Farmers can utilize Jaguza to perform a host of functions, including monitoring their animals' health and identifying their livestock.

The Netherlands-

based H2Oalert is a water control management system that checks the quality and quantity of cattle drinking water in real time. The management system also checks for pollution and malfunctions in the water supply.

Livestock technology continues to advance, and firms across the globe are developing new products and platforms to help livestock farmers make their operations more efficient, sustainable and productive.

University of Kentucky taps Steven Price to lead Forestry and Natural Resources Department

Dr. Steven Price is the new Department Chair of the Forestry and Natural Resources Department at the UK Martin-Gatton College of Agriculture, Food and Environment

By Christopher Carney

LEXINGTON, Ky.— The University of Kentucky Office of the Provost has recently appointed Steven Price as Chair of the Department of Forestry and Natural Resources (FNR) at the Martin-Gatton College of Agriculture, Food and Environment. Price's administrative appointment begins Feb. 1 and concludes Jan. 31, 2032.

"Dr. Price is an outstanding scholar, mentor and leader who understands the critical role forests and natural resources play in Kentucky's economy, environment and communities," said Laura Stephenson, vice president for land-grant engagement and dean of the Martin-Gatton College of Agriculture, Food and Environment. "His vision for FNR aligns with our land-grant mission to advance discovery, educate the next generation of leaders and support communities throughout

Kentucky."

With woodlands in each of the 120 counties and forest industries in 110 counties, Kentucky's forests contribute approximately \$20 billion to the Commonwealth's economy annually. For Price, advancing the college's commitment to supporting Kentucky's woodlands starts with UK's people within the FNR Department.

"I am excited about leading a team dedicated to advancing forestry, wildlife and sustainable natural resource management in Kentucky," Price said. "Our foundation is strong, with excellent staff, innovative faculty and outstanding students who value our hands-on instructional and research opportunities."

Price joined UK's FNR Department in 2012 as a research and teaching faculty member. From 2017 to 2023, he served as director of graduate studies for the Forest and Natural Resource Sciences graduate

Dr. Steven Price.

program, helping develop a new doctoral program. Price is currently a professor of stream and riparian ecology and has served as acting FNR department chair since Feb. 2025.

Price's research focuses on the conservation and management of nongame wildlife and freshwater systems, addressing critical issues in forestry, land management, restoration science and other natural resource topics relevant to Kentucky and the Central Appalachian region. The central goal of his research program is to mentor and train

Photo by Matt Barton students.

As a UK faculty member, Price and his students have established a strong scholarly record — publishing 78 peer-reviewed articles and securing approximately \$7 million in research funding from federal and state agencies, as well as nongovernmental organizations.

His teaching portfolio includes undergraduate and graduate courses in FNR, such as Herpetology and Research Methods in Forestry. Although he has not held a formal Extension appointment, Price's Lab group is actively

engaged in outreach and Extension-related activities across Kentucky.

Price is excited about FNR's future, building on the department's many successes and continuing to support the college's land-grant mission.

"Our efforts will focus on increasing research and Extension impact, expanding instructional programs and investing in the department and its facilities, with an emphasis on providing FNR students with the opportunities and instruction needed to prepare them for careers in forest and natural resource management," Price said. "While there is much work ahead, more for me to learn and always challenges to navigate, I am committed to putting in the hard work and perseverance needed to achieve the department's shared goals."

Price's administrative appointment is still

pending final approval by the UK Board of Trustees during its next meeting, scheduled for April 24.

Learn more about the Forestry and Natural Resources Department at Martin-GAFE.

Messages from Commissioners of Agriculture

Jonathan Shell
KENTUCKY

Welcome to the 60th National Farm Machinery Show, the country's largest indoor farm show. It's a can't miss event – one that we are proud is hosted in Kentucky.

Farming is a way of life for many in Kentucky, but its impact is vital for every resident. It's why, as Kentucky Agriculture Commissioner, I'm dedicated to ensuring a bright future for agriculture.

Kentucky has long been rooted in agriculture so much so that 2025 agricultural cash receipts are expected to once again be near record levels of \$8.3 billion. That reflects just a portion of the

estimated \$49.6 billion impact agriculture has on Kentucky's economy.

From its No. 1 farm commodity, poultry, to beef cattle, which numbers rank Kentucky as the No. 1 beef producing state east of the Mississippi River, to corn and soybean, two commodities that each bring in more than \$1 billion annually, Kentucky's wide diversity of farm products keeps the state growing. Agriculture means economic development.

The Kentucky General Assembly recognized that potential when it committed \$5 million toward agricultural economic development. With this funding we aim to amplify net income for existing farming operations and expand agricultural infrastructure, allowing Kentucky farmers and ranchers to realize the value added by a robust circular supply chain.

Considering the urgent need for farmland preservation and supply chain expansion and stability in thousands of families across the Commonwealth, this is an important and critical step.

Farming is necessary. But farming is hard and expensive. As a result, farmland is shrinking at an alarming rate in Kentucky. It is imperative that we find a way to keep farmland productive, both in the agricultural sense and in the financial sense.

With this momentum, the Kentucky Department of Agriculture is embarking on a statewide initiative to increase agriculture's economic stronghold. Investing in agriculture ensures the long-term prosperity of farming families across the state sustaining agriculture for generations to come.

— Jonathan Shell
Kentucky Agriculture Commissioner

Jerry Costello
ILLINOIS

Illinois Department of Agriculture announces \$3.6 Million in grant funds for local food infrastructure

SPRINGFIELD – The Illinois Department of Agriculture (IDOA) announced plans to distribute \$3.6 million in fiscal year 2026 at the Everything Local conference in Springfield on Wednesday. The funds, which were appropriated in the FY26 state budget, will be used to support local food processing, aggregation, and distribution. Grants will be available for collaborative projects from \$1,000 to \$250,000 and for

individual projects from \$1,000 to \$75,000.

"Strong agriculture depends on strong infrastructure," said IDOA Director Jerry Costello II. "The Local Food Infrastructure Grant program gives Illinois farmers the processing, aggregation, and distribution capacity they need to ensure Illinois-grown food can reach consumers."

Applications for grant funding will be available February 18, 2026, on the Illinois Department of Agriculture website.

"Everyone benefits when we empower our local farmers," said State Senator Doris Turner (D-Springfield), Chair of the Senate Agriculture Committee. "By fortifying the food system, we are supporting our local farmers and mitigating food insecurity. This funding will expand access to fresh, local foods, strengthen the local economy and grow the food supply chain."

"When we say farm-to-home food, we forget about the critical infrastructure in between," said State Senator David Koehler (D-Peoria), member of the

see INFRASTRUCTURE, page B9

Andy Holt
TENNESSEE

Last year, I transitioned from serving as Deputy Commissioner to leading the Tennessee Department of Agriculture (TDA) as Commissioner. I reflect on 2025 as a year of growth and recovery for Tennessee's agricultural and forestry sectors.

TDA awarded a new round of Agricultural Enterprise Fund grants—investing in a wide array of enterprises, from dairy and wood products to apiaries, specialty food and ag tech operations—designed to increase farm income, expand markets and foster innovation across our rural economy.

We also launched another round of the Forestry, Agriculture, and Rural Markets cost share program, committing funds to help farmers and forest products producers invest in essential equipment to strengthen agricultural supply chains, support job creation and build resilience.

Looking ahead, I envision 2026 as a year of strengthening economic opportunity and ensuring agriculture and forestry remain the cornerstones of Tennessee's economy and communities.

I am engaging more deeply with producers through enhanced outreach. My Tennessee Roots Tour is underway where I am connecting directly with farmers, forest landowners and rural communities, listening to their needs and celebrating their contributions.

I also want to highlight the critical relief and recovery efforts following Hurricane Helene. In late 2025, the U.S. Department of Agriculture awarded a \$38.1 million block grant to Tennessee that is designated for East Tennessee counties. The Hurricane Helene Agricultural and Timber Relief Fund application window is expected to open in 2026.

— Andy Holt
Tennessee Agriculture Commissioner

Don Lamb
INDIANA

Many people think of Indiana as a corn and soybean state. While it's true that Indiana ranks fourth in the country for soybean production and fifth for corn, our agricultural landscape is far more diverse than most realize. Even as rowcrop farmers continue to face low commodity prices and high inflation, our livestock sectors remain strong. Indiana is also home to a thriving hardwood industry and a wide range of specialty crops, including watermelon, cantaloupe, tomatoes, mint and potatoes. Over the past year, our state has made real progress in recognizing this

diversity and supporting growth across all sectors.

We also have several exciting new ventures underway. Sustainea's investment in Lafayette marks an important opportunity for Indiana agriculture. By using cornbased dextrose to produce renewable bioMEG, the project creates a new and reliable market for Hoosier grown corn. This added demand supports local prices and gives farmers another outlet for their grain. Sustainea's partnership with Primient, including its regenerative agriculture initiative, further promotes soil health and longterm sustainability. Together, these efforts connect Indiana farmers to a growing biobased manufacturing sector and reinforce the state's leadership in agricultural innovation. Looking ahead to 2026, our focus is on raising revenue and reducing production costs for our rowcrop farmers. As always, Indiana producers will meet challenges with innovation and determination. Nationally, we will continue to pursue export opportunities and build relationships with emerging markets. And we will keep adding value to the products we grow — something Indiana agriculture has long excelled at.

Agriculture is special, and I am proud to be part of Team Ag Indiana
— Don Lamb,
Indiana Commissioner of Agriculture

ASSISTANCE,
from page B1

(according to most recent Census) contains 960 farms. We dare say if it was announced that any business or industry was seeing a 13 million dollar boost to 960 employees in our area, it would be big news! Yet, our local farmers will humbly and appreciatively accept these payments and reinvest them into loan payments or even higher input costs with the hope that 2026 will be much better. It's the Farmer Way!

Thank a farmer... these payments are not a Handout but rather a Hand Up trying to assist our farmers while embracing our American Cheap Food

2026 USDA Farm Bridge Assistance (FBA)			
Here are the economic impact estimates based on multiplying the acreage in each county (corn, soybeans, wheat, canola) by the recent USDA Farmer Bridge Assistance per-acre payment rates. Acreages are estimates based on most recent Census of Ag.			
Estimated Economic Impact by County			
Ballard County (KY)	Crop	Acres	Payment Rate
Corn	25,175	\$44.36	Total Bridge Payments
Soybeans	35,925	\$30.88	\$1,116,383
Wheat	10,206	\$39.35	\$1,109,196
Canola	3,000	\$23.57	\$401,510
Total estimated (Ballard): ~			\$70,710
			\$2,697,799
Carlisle County (KY)	Crop	Acres	Payment Rate
Corn	29,632	\$44.36	Total Bridge Payments
Soybeans	58,965	\$30.88	\$1,314,556
Wheat	18,205	\$39.35	\$1,820,325
Canola	5300	\$23.57	\$716,596
Total estimated (Carlisle): ~			\$124,921
			\$3,976,398
Hickman County (KY)	Crop	Acres	Payment Rate
Corn	35,049	\$44.36	Total Bridge Payments
Soybeans	47,306	\$30.88	\$1,109,000
Wheat	14,167	\$39.35	\$1,460,557
Canola	900	\$23.57	\$557,540
Total estimated (Hickman): ~			\$21,213
			\$3,594,672
Fulton County (KY)	Crop	Acres	Payment Rate
Corn	25,000	\$44.36	Total Bridge Payments
Soybeans	53,000	\$30.88	\$1,109,000
Wheat	7,100	\$39.35	\$279,385
Canola	1500	\$23.57	\$35,355
Total estimated (Fulton): ~			\$3,060,380
Summary — Total Estimated Bridge Payments			
WAVE AG County			Other WAVE Counties
Ballard ~	\$2.69 million		McCracken - \$1.41 million
Carlisle ~	\$3.98 million		Calloway - \$3.38 million
Hickman ~	\$3.59 million		Graves - \$6.64 million
Fulton ~	\$3.06 million		Marshall - \$1.5 million
Grand total (all four WAVE AG counties): ~ \$13.32 million			
Grand total of All Purchase Counties - = \$26.25 million

policy.

We need to take care of our Farmers... instead of talking about farmers using the word

"Survivability" we need to be talking about "PROFITABILITY"! Farmers deserve a Profit!

Farmers appreciate EPA's science based approach

American Farm Bureau Federation President Zippy Duvall commented today on EPA finalizing the registration of dicamba products.

"Farmers appreciate the decision by Administrator Lee Zeldin and the EPA to release a new registration and updated label for

dicamba, an important herbicide that allows farmers to grow safe and healthy food and

see APPROACH, page B9

Jonathan Reynolds honored with KSA's Eddie Voils Leadership Award

The Kentucky Soybean Association (KSA) presented its 2025 Eddie Voils Leadership Award during the Kentucky Commodity Conference held on January 15.

This award is presented to the past year's top volunteer. It is a reflection of hard work, respect, and dedication to the soybean industry. This award is named for former KSA President Eddie Voils, who was extremely passionate about what the Kentucky Soybean Association stands for.

This year's winner has been an active member of the Kentucky Soybean Association since 2016, and he has earned this award through dedication to service in a wide variety of ways.

Jonathan Reynolds first came on the soybean scene as a youngster, accompanying his grandfather to the National Farm Machinery Show, Murray State University Soybean Promotion Day, University field days and other events. While still in college at the

Murray State University Hutson School of Ag, he reached out to the soybean office to inquire if he could attend Soybean Leadership College while still an undergrad. Of course, the answer was a resounding "yes," and he has been active ever since.

From Frankfort to Washington, D.C., Reynolds has a solid grasp on issues that affect his operation (and yours) at the farm gate level. Time spent with his grandfather along with his FFA State Officer training have served him well, as he's an outstanding and persuasive speaker. He's written and signed off on countless letters since

being in Association leadership, and he's quite accessible to the media, speaking out on everything from the Farm Bill and the 45 Z tax credit to the biofuels policy and bridge payments.

Recently, Reynolds was re-elected as President of the Kentucky Soybean Association. He also serves on the Kentucky Soybean Promotion Board, helping to invest Kentucky's portion of the soy checkoff into efforts designed to elevate return on investment and provide opportunities for Kentucky soybean farmers to succeed.

Celebration.

Reynolds accepts the Eddie Voils Leadership Award from Eddie Voils' granddaughter, Ashley Coffey, during the Kentucky Commodity Conference Awards Celebration.

Farming tips for horses and mules

Choosing & Using the Right Animal

Mules = endurance + brains. They're fantastic for hot climates, hills, and long days. Less likely to overwork themselves.

Horses = power + responsiveness. Great for heavier pulls and quicker field work.

Match size to task.

Oversized animals waste feed; undersized ones get sore and sour.

Harness & Equipment (this matters more than people think)

Fit is everything. Poorly fitting collars cause sore shoulders fast. Check for rubs daily.

Keep leather clean and oiled. Dirt = friction = wounds.

Balance the load. If a plow or wagon pulls crooked, the animal pays for it.

Training & Handling

Consistency beats force. Calm repetition builds trust and reliability.

Voice commands are gold. "Whoa," "gee," and "haw" save your arms and the animal's mouth.

Train young but don't rush. Short sessions, quit on a good note.

Field Work Smarts

Work during cool hours. Early morning and late afternoon preserve energy and health.

Take frequent breathers. Especially after turns or heavy pulls.

Watch footing. Mud, stones, and uneven ground cause injuries fast.

Feeding & Health

Good hay first, grain second. Most work animals don't need heavy grain if forage is quality.

Salt and clean water always available.

Hoof care is non-negotiable. Trim regularly; shoes only if conditions demand it.

Know heat stress signs: heavy sweating — no sweating — trouble. Stop early.

Mules: Special Notes

They remember everything. Good handling creates a partner; bad handling creates a lifetime problem.

Stubborn = usually confused or uncomfortable. Check harness, load, or footing before blaming attitude.

They're excellent teachers. If a mule refuses, there's often a reason.

Farmer Mindset

Think long-term. A healthy animal that works 10–15 years beats one pushed hard for 2.

Respect the animal's intelligence. They're coworkers, not machines.

End the day right. Cool down, brush off sweat, check for sores.

Choosing the Right Plow

Single-bottom is your friend. Especially if you're new. Better control, less fatigue for animals.

Match plow size to soil. Heavy clay needs a narrower bottom; light sandy soil can handle wider.

Sharp share = happy animals. A dull plow can double the draft. Keep it filed or replaced.

Hitching & Draft Setup

Set the singletree level. If it tilts, the pull is uneven and hard on shoulders.

Correct draft line matters. The pull should go straight from collar to plow—no upward or downward strain.

Adjust traces, not muscle. If it's pulling hard, stop and adjust instead of pushing the team.

Depth & First Furrow

Don't start too deep. First round should be shallow to open the soil.

Ideal depth: usually 5–7 inches. Deeper isn't better—it's just harder.

Straight first furrow sets the whole field. Take your time lining it up.

Team Management While Plowing

Steady pace beats speed.

Let the plow do the work.

Use your lines lightly. A relaxed hand keeps the animals relaxed.

Watch shoulders and breathing. If they're straining, something's wrong—stop and check.

Turning at the Headland

Lift the plow early. Don't drag it through the turn.

Give animals room.

Tight turns stress shoulders and minds.

Keep turns consistent. Predictability keeps the team calm.

Soil & Timing

Plow when soil crumbles, not smears. Too wet = compaction; too dry = brutal draft.

Fall plowing: easier pull, buries residue.

Spring plowing: lighter work but needs good timing to avoid clods.

APPROACH, from page B8

fiber. EPA's review and approval process, based on sound science, resulted in guidance that gives us continued confidence it can be safely applied. We look forward to helping ensure farmers clearly understand the updated label requirements.

"Farmers take seriously our responsibility to care for the resources we've been entrusted with, including the careful use of pesticides. Today's announcement will provide farmers with certainty as they plan for this year's planting

season."

Farm Bureau has long advocated for access to safe, effective and innovative crop protection tools. This week, AFBF joined several other agricultural organizations in calling on EPA to uphold its science-based review and approval process.

photo credit: AFBF Photo, Right Eye Digital

Working With Mules vs Horses (Plowing)

Mules prefer lighter, steady draft. They shine in long straight pulls.

Horses handle sudden resistance better. Like roots or heavy sod.

Let mules think. If they slow down, check the plow—don't whip.

Common Plowing Problems (and Fixes)

Plow won't stay in ground: adjust clevis lower, add depth gradually.

Hard pulling: sharpen share, reduce depth, check soil moisture.

Uneven furrows: check hitch alignment and animal stride match.

End-of-Day Plowing Care

Cool animals before unhitching.

Wash sweat and dirt off shoulders and collar area.

Clean and oil the plow. Rust ruins tomorrow's work.

Old-timer rule worth remembering:

If the animals look tired, the plow is wrong. If the plow looks right, the animals won't be tired.

INFRASTRUCTURE, from page B7

Senate Agriculture Committee. "This investment ensures that our food makes it from farm to local food processor and distribution safely and cleanly to your plates at home."

"With food prices rising across Illinois, investing in local food infrastructure is no longer optional, it's essential," said State Representative Sonya Harper (D-Chicago), Chair of the House Agriculture and Conservation Committee.

"We created this program to strengthen our farmers, shorten the supply chain and ensure Illinois families can access affordable, locally grown food. I've spent my career fighting to move our

state from food deserts and fragile systems toward real, durable solutions, and this investment helps put that vision into action."

Eligible applicants include Illinois residents who store, process, package, aggregate or distribute value-added agricultural products or plan to do so. These entities must meet one of the following criteria:

an Illinois farm with fewer than 50 employees

an Illinois cooperative with fewer than 50 employees

an Illinois slaughter and/or processing facility with fewer than 50 employees. Slaughter and/or processing facilities must be USDA or state licensed or be a custom exempt

slaughter and/or processing facility

an Illinois food business with fewer than 50 employees

an Illinois food hub

with fewer than 50 employees

an Illinois nonprofit organization a unit of local government in Illinois

To encourage further expansion of the local food industry, all grant funding must be used for purchasing, leasing to own, renting, building or installing infrastructure related to the processing, storage, aggregation, or distribution of value-added agricultural products.

Those interested can prepare for the upcoming application by pre-registering with SAM.gov and the GATA Grantee Portal.

Additional information about the program, supporting links and helpful guidance on getting ahead on the application can be found on the Department's website.

KSA elects 2026 executive committee

The Kentucky Soybean Association (KSA) Board of Directors elected its 2026 Executive Committee during the January 14 board meeting.

Jonathan Reynolds of Clinton will serve as President, Clay Wells of Clay as Vice-President, Drew Langley of Glendale as Secretary, and Matt Gajdzik of Shelbyville as Treasurer. The slate of officers was elected unanimously.

"It's an honor to serve with these farmer-leaders," Reynolds said. "I'm

grateful to serve as KSA President, but this is not a one-man show. Having a solid executive committee is crucial to the success of our organization, and this officer team is just that." Reynolds added that he was pleased to see that the officer team is composed of farmers from four different areas of the Commonwealth.

"I think it's great that we have farmers willing to step up and serve as directors and even as officers from across the state," he said. "It wasn't that many

years ago that KSA went from having five Areas to having six, to provide growers throughout the state with more representation, and having a President from the Purchase Area, Vice-President from Green River, Secretary from Lincoln Trail and Treasurer from Central Bluegrass gives us several different geographic perspectives. I think that's ideal."

To learn more about the Kentucky Soybean Association or to become a member, visit KySoy.org.

The KSA 2026 Executive Committee includes, l-r Jonathan Reynolds of Clinton, President; Clay Wells of Clay, Vice President; Drew Langley of Elizabethtown, Secretary; and Matt Gajdzik of Shelbyville, Treasurer.

LIVE ONSITE AUCTION

HERRON AUCTION & REALTY HAS BEEN AUTHORIZED TO SELL THE FOLLOWING:

170.23+/- ACRES • 50 POULTRY BROILER HOUSES • 5 RESIDENTIAL HOMES • OFFERED IN 9 TRACTS

WEBSTER COUNTY, KY and MCLEAN COUNTY, KY

THURSDAY, FEBRUARY 19TH @ 10AM CST

OFFERED
IN
9 TRACTS

Tract #1 1866 Gravel Pit Road, Sebree, KY 42455

- 21.51+/- Acres of Land and 8 Poultry Broiler Houses
- Each Broiler house is 43ft x 510ft (built in 1997)
- Private Location
- Easy Access
- Pond on property
- Approximately 12 miles to Tyson Processing Plant & Hatchery
- County Water
- Interior Gravel Road access to structures

21.51+/-
ACRES

Tract #2 53 Honeysuckle Lane, Sebree, KY 42455

- 13.181+/- Acres of Land and 8 Poultry Broiler Houses
- Each Broiler house is 43ft x 510ft (built in 1997)
- Quiet location on the outskirts of Onton Ky.
- Approximately 1,800 feet of gravel road frontage on Honeysuckle Lane
- County Water
- Only 1/2 mile to the Gravel Pit Road farm
- Tracts 3 & 4 directly across Honeysuckle Lane

13.181+/-
ACRES

Tract #3 70 Honeysuckle Lane, Sebree, KY 42455

- 6.477+/- Acres of Land and Single Family Home
- 1,620 square feet of living space
- 3 bedrooms and 2 bathrooms
- Built in 1998
- Vinyl siding and concrete block foundation
- Peaceful location with pond on property and serene country living

6.477+/-
ACRES

Tract #4 Honeysuckle Lane, Sebree, KY 42455

- 4.48+/- Acre vacant lot
- Approximately 350 feet of frontage on Honeysuckle Lane
- Peaceful and Quiet Country Property
- Located Between Sebree and Onton
- Adjoins tract 3

4.48+/-
ACRES

Tract #5 1714 Wrightsburg Road, Sebree, KY 42455

- 14+/- Acres of land and 4 Poultry Houses with Compost Shed
- Property on the corner of Wrightsburg Rd and BD Luck Rd near Onton Ky.
- Each Broiler house is 43ft x 510ft (built in 1997)
- 48X80 Compost Shed built in 2015
- Approximately 350 feet of blacktop road frontage on Wrightsburg Rd
- Approximately 1,300 feet of blacktop road frontage on BD Luck Rd
- Easy access with interior gravel road
- Close to Tyson Processing Plant
- Potential for multiple alternative uses

14+/-
ACRES

Tract #6 1061 Collins Road, Sebree, KY 42455

- 40.326+/- Acres of Land, 8 Poultry Broiler Houses and Single Family Home
- Property is on both sides of Collins Road
- Each Poultry House is 43ft x 510ft (built in 1997)
- 1,690 square feet of living space in home with carport
- 3 bedroom 2 bathroom
- Country Cottage home with aluminum siding, metal roof, and one story
- 8+/- acres of row crop tillable ground
- 8+/- acres of pasture and pond for livestock
- Great location with approximately 1,040 feet of blacktop road frontage
- Only 5 miles to Sebree

40.326+/-
ACRES

Tract #7 1097 Collins Road, Sebree, KY 42455

- 16.52+/- Acres of Land w/ 8 Poultry Broiler Houses and Single Family Home
- Each Poultry Broiler house is 43ft x 510 (built in 1997)
- Ranch style vinyl sided home with metal roof and 1,620 square feet of living space
- 3 bedrooms 2 full bathrooms built in 1997
- Private location
- Access of Collins Road with easement
- Only 7 miles to Tyson Processing Plant
- 5 minutes to Sebree

16.52+/-
ACRES

Tract #8 1842 Ky. Highway 56 N., Calhoun, KY 42327

- 16.856+/- Acres of Land w/ 5 Poultry Broiler Houses and Single Family Home
- Each Poultry Broiler House is 43ft x 510ft (built in 1997)
- 8 broiler house sites initially, 2 structures damaged in storm
- One story 3 bedroom 2 bathroom vinyl sided home w/ metal roof
- 1,360 square feet of living space
- Blacktop road frontage
- County water
- Close to Owensboro and Calhoun
- Only 6 miles to Tyson Hatchery and 13 miles to Processing Plant
- Lots of potential for alternative uses

16.856+/-
ACRES

Tract #9 2500 Ky. Highway 56 N., Calhoun, KY 42327

- 36.88+/- acres of Land w/ 8 Poultry Broiler Houses, Compost Shed, & Single Family Home
- Each Poultry Broiler House is 43ft x 510ft (built in 1997)
- 40x120 Compost shed
- Pond and mixture of woods
- One story aluminum sided home w/ metal roof
- 3 bdrms 2 bths w/ 1360 sq ft of living space
- Adjoins tract 8
- County water
- Easy access

Pleased with latest 45Z proposal, corn growers commend administration

By Bryan Goodman & Matt Ziegler
National Corn Growers Association

A proposal released today by the U.S. Department of Treasury on a tax credit designed to help the biofuel industry sell into the aviation sector was met with positive reception among the nation's corn growers.

"Treasury's proposal is a definite step in the right direction and will allow corn growers to transition into and supply the aviation sector," said Ohio

farmer and National Corn Growers Association President Jed Bower. "Being able to fuel commercial planes with fuel derived from corn would be important to the long-term economic viability of farming. After today we are one step closer to that possibility."

Last year, Congress preserved and improved aspects of the tax credit in the One Big Beautiful Bill Act. Today's guidance reaffirmed many of those improvements.

Corn growers said they were particularly pleased

to see the direct reference to agricultural practices

in the proposal. "This is good news for farmers as we

continue look for any and all avenues to secure and enhance

markets for corn," Bower said. "This administration has shown that it understands the importance of biofuels to American farmer's future, this proposal confirms that."

Bower said he hopes Treasury will keep up the momentum by working with other agencies as they update the crucial 45Z-CF GREET model to appropriately account for farmers' hard work. He said NCGA will provide comments on the proposal and participate in the public hearing May 28th.

Securing vintages with regenerative farming

The global wine industry is not immune to the effects of climate change and soil degradation. Through a process of regenerative farming, soil health is protected and vintages can be produced with great success.

What is regenerative viticulture?

Regenerative viticulture, also known as regenerative agriculture, is farming that emphasizes the regeneration of soil health, says Eco Terreno Wines & Vineyards. These farming practices are organic and ecologically-driven to enhance the ecosystem through a partnership with

nature. Regenerative viticulture focuses heavily on soil health, carbon sequestration and biodiversity.

Components of regenerative viticulture
Five primary principles drive regenerative viticulture: minimizing soil disturbance, keeping the soil covered, maintaining living roots year-round, increasing plant diversity, and integrating livestock. The Regenerative Viticulture Foundation says the goal is to create a "closed-loop" system where the vineyard provides its own nutrients instead of having to use

synthetic ones.

Cover crops

The use of cover crops can increase soil organic carbon (SOC), which is vital for mitigating the wine industry's carbon footprint. According to research published in the Journal of Cleaner Production, use of cover cropping in vineyards can increase SOC by up to 1.5 tons per hectare annually, making processes much more eco-friendly. What's more, cover cropping can improve the water retention capacity of soil. This is essential in regions where drought cycles have been on the rise.

Animal integration

The primary role of animals in regenerative agriculture is "prescriptive grazing." By allowing livestock to graze between rows during the dormant season, vintners can eliminate much of the need for mechanical mowing and herbicide application. Data from the Regenerative Viticulture Foundation found sheep can reduce the need for tractor passes by up to 80 percent, significantly lowering the vineyard's carbon footprint while preventing soil compaction. Animals also convert plant

matter into high-quality manure and urine, providing bioavailable sources of nitrogen, phosphorous and potassium.

Chickens and ducks also may be deployed to manage pest

populations like mealybugs or snails near vines without the need for synthetic insecticides. Animals also naturally aerate the soil through their beaks, feet and hooves, allowing organic

matter to get into the earth more readily.

The future of healthy vineyards may rely on regenerative viticulture, which safeguards the land and ensures successful production cycles.

Former Kentucky State Senator Paul Hornback receives Thomas Poe Cooper Farm Leadership Award

Hornback is recognized for his integral work in the Kentucky General Assembly to move the agriculture industry forward

By Grace Sowards

LEXINGTON, Ky. — The University of Kentucky Cooperative Extension Service presents the Thomas Poe Cooper Farm Leadership Award each year to Kentuckians who exemplify leadership across agriculture, 4-H, family and consumer sciences or community and economic development. The award was endowed by Cooper, dean of the UK Martin-Gatton College of Agriculture, Food and Environment from 1917 to 1951.

Former Kentucky

State Senator Paul Hornback received the award for his dedication to the Kentucky agriculture industry throughout his career.

Hornback was elected to the Kentucky State Senate in 2010, representing Shelby, Carroll and Trimble counties, and part of Jefferson County. While in office, he served as Chair of Senate Agriculture, Vice Chair of Senate Licensing and Occupations, and Co-chair of the Tobacco Settlement Agreement Fund Oversight Committee.

"Sen. Hornback has

been a mentor to young farmers, a trusted adviser to local officials and a respected advocate for agricultural issues across the state," said Jennifer Hunter, associate dean and director of UK Cooperative Extension. "We are honored to recognize his service to agriculture and to Kentucky."

During Hornback's time in the General Assembly, he was an active farmer. This gave him a unique perspective while advocating for his peers in the Commonwealth. Some of his most significant

Associate dean and director of UK Cooperative Extension, Dr. Jennifer Hunter, presented the 2025 Thomas Poe Cooper Farm Leadership Award to former Kentucky State Senator Paul Hornback.

Photo by Matt Barton

accomplishments during that time were the reestablishment of hemp as a legal commodity in Kentucky, the reorganization of the Kentucky State Fair Board, modernizing Kentucky's grain indemnity fund and leading the Governor's Office of Agriculture Policy.

The UK Research and Education Center at Princeton has benefited from Hornback's dedication to Kentucky agriculture. He helped lead the charge in raising the initial \$15 million investment for the Grain and Forage Center for Excellence. After the devastating 2021 tornadoes in Western Kentucky, Hornback worked to earn the \$9 million

donation from the Western Kentucky State Aid Funding for Emergencies Act.

"This recognition is such an honor," Hornback said. "I think the world of Martin-Gatton CAFE and the Extension service. All my life we've depended on them for what we do — farmers, homemakers, everyone. They keep the public connected."

For more information about Extension or the Thomas Poe Cooper Farm Leadership Award, visit extension.ca.uky.edu/.

AI is transforming agriculture

Technology has revolutionized global agriculture. Automation has changed the agricultural sector, and those changes might have arrived in the nick of time.

The global population is projected to reach nearly 10 billion by 2050, and the Food and Agriculture Organization of the United Nations estimates that food production has to increase by at least 70 percent to keep up with demand. In order to address the deficit without exhausting the Earth's finite resources, many farmers are seeking help from artificial intelligence (AI). AI offers farmers additional perks as well.

Precision agriculture

Precision is a notable benefit of utilizing AI within the agricultural sector. By using AI-powered sensors and satellite imagery, farmers can monitor crop health by looking at each and every plant instead of inspecting by the acre. According to a

report by Marketsand Markets, a revenue impact and marketing consulting firm, the market for AI in agriculture is expected to grow from \$1.7 billion (the figure in 2023) to \$4.7 billion by 2028.

Precision helps to keep plants strong and weed-free. AI-driven "see-and-spray" technology utilizes computers to identify weeds among crops and apply

herbicides only to those weeds. This reduces blanket-spraying an entire field, which is a waste of resources. Research published in the Journal of Agriculture and Food Chemistry indicates that this AI-guided tool can reduce herbicide use by up to 90 percent. This reduces costs to farmers and benefits local ecosystems.

Risk management

Weather across the planet has featured an uptick in volatile, unanticipated conditions. This can make planting even more challenging for farmers. AI models can process decades of historical weather data, soil conditions and atmospheric changes to offer predictive analytics that help the agriculture industry.

deficiencies or fungus days before a human might recognize such indicators. By catching things early, farmers can reduce risk of a poor crop and financial losses.

Automation

Agricultural labor shortages are forcing farming operations to seek alternatives to get the job done. The American Farm Bureau Federation notes that farm labor has become more expensive and it's harder to find workers who want to do the arduous tasks often required of them. AI-driven robotics and autonomous tractors guided by GPS can help fill the void.

These devices can work through the night, preparing soil, harvesting crops and performing other vital tasks.

AI continues to be integrated into the agricultural sector. In order to maintain food security and mitigate labor shortages, farming operations are using technological tools to bridge gaps and improve efficiency.

The global population is projected to reach nearly 10 billion by 2050.

PRACTICE FARM SAFETY

Guidelines for farmers and workers

Agriculture is routinely ranked among the most dangerous professions around the world. Both the National Safety Council and the National Institute for Occupational Safety and Health say agriculture is one of the most hazardous industries in the United States. Farming operations continue to push forward with more mechanized and high-tech equipment that requires routine reviews of safety protocols.

According to the Bureau of Labor Statistics and NIOSH, the agricultural sector recorded a fatal injury rate of approximately 18.6 deaths per 100,000 workers in 2023. Transportation incidents, notably tractor rollovers, remain the leading cause of death. Furthermore, recent reports from the National Children's Center for Rural and Agricultural Health and Safety indicate that a child dies in an agriculture-related incident in the United States approximately every three days, which underscores the need to prioritize farm safety across all age groups.

Ensuring safe working conditions is vital within the agricultural sector. These guidelines can set the course for safer farming work.

- Rollover Protective Structure (ROPS):** The most effective lifesaver on a farm is ROPS. When combined with seatbelt use, ROPS is 99 percent effective in preventing death during a tractor overturn. ROPS are roll bars or roll cages fitted for wheel- and track-type tractors, says Penn State Extension. Modern guidelines indicate that all machinery should be fitted with updated guarding to prevent entanglement accidents, which are often caused by Power Take-Off shafts.

- Respiratory protection:** Grain bins and silos can pose significant risks on a farm. This includes toxic air exposure as well as the risk for engulfment. High-profile incidents in 2023 illustrated the threat that oxygen-limiting silos can pose after deadly carbon dioxide concentrations form. Risk of suffocation also is great in a grain bin if a person is

engulfed by grain. Workers should never work in a bin alone and should utilize a lockout/tagout system to ensure that all augers are off before entry.

- Chemicals and biological hazards:** High-potency pesticides and fertilizers create their own hazards on the farm. Personal protective equipment (PPE) is a must when working with chemicals. Most modern standards require proper ventilation, chemical-resistant gloves and dedicated eye protection to prevent acute poisoning and long-term health issues.

- Hearing protection:** Exposure to the sounds of farm machinery and other equipment can result in tinnitus (ringing in the ears) and eventual hearing loss unless hearing protection is worn regularly.

- Fatigue and mental health:** Mental and physical fatigue of farm workers can result in injury as well. A critical trend uncovered in recent agricultural safety research ultimately led researchers to conclude that "fatigue management" needs to be prioritized, according to the United States Department of Agriculture. Tired operators can be vulnerable to lapse-of-attention errors, so farmers are encouraged to implement scheduled breaks. The Rural Health Information Hub says that stress also is a big factor for farmers. Environmental factors such as drought, floods, wildfires, pests, and diseases, as well as long hours and financial concerns, can result in feelings of isolation and frustration. Stress is a known precursor to physical accidents on the farm.

These are just some of the risk factors on farms that can lead to accident or injury. Falls from ladders, injuries from livestock, exposure to UV rays, and exposure to high levels of dust, mold and bacteria also can affect modern farmers. Agricultural safety needs to evolve as quickly as the changing operations on farms.

Addressing limited resources in the agricultural sector

Limited resources in the agricultural sector are common pressure points for modern farm operations. Whether the resource is land, labor, water, or capital, lack of assets can cause strain. But there are practical ways to ease the pressure, and most solutions work best when combined with other methods.

Depleting agricultural resources

Resource depletion is a condition that affects many modern farmers. With an expanding global population, demand for food and other agricultural products is at an all-time high. This can put a strain on the finite resources available to farmers. Efficient use of resources must become a greater priority. Farmers

may want to invest in precision agriculture tools, such as GPS-guided equipment, soil sensors and variable-rate application tools, to use resources only where needed. Even crop rotation and manual soil testing can significantly reduce waste.

Soil concerns

According to the agricultural firm Verdesian, degrading and undervaluing farmland poses another challenge to today's farmers. Continuous farming practices can result in soil erosion, soil degradation and reduced fertility. Farmers can turn to sustainable practices to protect the soil and improve its health. Practices like conservation tillage and cover cropping help increase yields over time without the

need for more land or chemicals.

Water management

Agriculture puts a strain on water sources. Approximately 70 percent of global freshwater withdrawals are attributed to agricultural needs, says the World Resources Institute. Micro-irrigation can involve the use of drip or sprinkler systems to increase water efficiency. In regions with limited energy infrastructure, use of solar pumps will provide a low-cost, sustainable means to accessing groundwater. Treated urban wastewater can be used for non-food crops, preserving potable water for high-value produce and human consumption on

farms and elsewhere.

Capital

Limited capital can be a concern for farmers who are looking to invest in modern tools and practices. Cooperative financing and government support programs can reduce funding barriers. Farmers can pool resources to buy

in bulk and share expensive machinery. Educating the public also can be a step in the right direction. Despite research indicating a need to invest in agriculture, investment remains minimal. Agriculture also is a market with very volatile prices. But with more interest, the tides may change and make

investing in agriculture more attractive.

Addressing limited agricultural resources requires utilization of what's already available with an emphasis on sustainability. Through collaboration and discussion, farmers can find the assistance they need.

NATIONAL FARM MACHINERY SHOW ISSUE

KDA focus on farmers' health, safety at this year's National Farm Machinery Show

FRANKFORT, Ky. — Farmer appreciation and a focus on farmers' health will be the mission for the Kentucky Department of Agriculture's (KDA) Raising Hope, Safety, Health, and Rescue Program at the 60th National Farm Machinery Show.

The show, set for Feb. 11-14 at the Kentucky Exposition Center in Louisville, is the country's largest indoor farm show with more than 900 vendors. It brings thousands out to see the most complete selection of cutting-edge agricultural products,

equipment, and services available in the farming industry.

KDA's Raising Hope, a program that focuses on farm safety, farmer's health, and farm rescue, is using the popularity of the show to get a message to farmers and their families. In addition to farm safety exhibits and rescue exhibits, Raising Hope is partnering with several agencies to offer health and safety services and information to help farmers and agricultural producers remain at their physical best, Commissioner of

Agriculture Jonathan Shell announced.

"Healthy farmers, both physically and mentally, means healthier farms," Commissioner Shell said. "For years, KDA has offered world-class safety and rescue demonstrations. Now, with our Raising Hope program, we can also focus on the health aspect of our agriculture producers. Adding health screenings during the National Farm Machinery Show allows us to fulfill our mission and promise of advocating for healthy farming communities."

In partnership with the MASH (Mobile Agriculture Safety Health) Team, Raising Hope is helping farmers and agricultural producers focus on health.

Available health screenings will include those for blood sugar, blood pressure, cholesterol, hearing, and carotid artery. There will also be resources available for mental well-being and general health education. The health screenings will be available 9 a.m.-3 p.m. EST each day.

This year's show will feature KDA employees

demonstrating safety around farm equipment including tractors, Power Take Off (PTO), Rollover Protective Structure (ROPS), and more. Grain bin rescue methods and accident prevention will also be demonstrated, along with information about "Share the Road" safety and signage.

Partnerships for this year's show include Southeast Center for Agricultural Health and Injury Prevention, Appalachian Regional Healthcare, KY Hears/Heuser Hearing, and the University of Kentucky Martin-Gatton College of

Agriculture, Food, and Environment.

The health screenings and health education are components of the newly formed Division of Farm Safety & Rural Health, which was created to promote the physical and mental health and safety of Kentucky's farmers and farm families. Raising Hope, which joined forces with KDA's Farm Safety program in 2025, is supported by appropriations from the Kentucky General Assembly and the U.S. Department of Agriculture.

Soybean losses continue despite assistance

By Scott Gerlt, PhD

Soybean farmers in the United States are experiencing an extremely difficult crop year. The 2025 harvest is projected by the U.S. Department of Agriculture (USDA) to be the most expensive soybean crop ever on a per acre basis. Concurrently, geopolitical factors undermined soybean demand, suppressing prices received by farmers. These factors combined leave soybean producers with a third straight year of significant market losses.

Soybean farmers have been at the tip of the spear in international trade turmoil yet have received very low assistance rates to help absorb this loss. Beyond direct assistance, strong Renewable Fuel Standard levels and finalized biofuel tax credit guidance would bolster domestic demand.

Soybean Farmers Have Suffered Historic Export Losses and

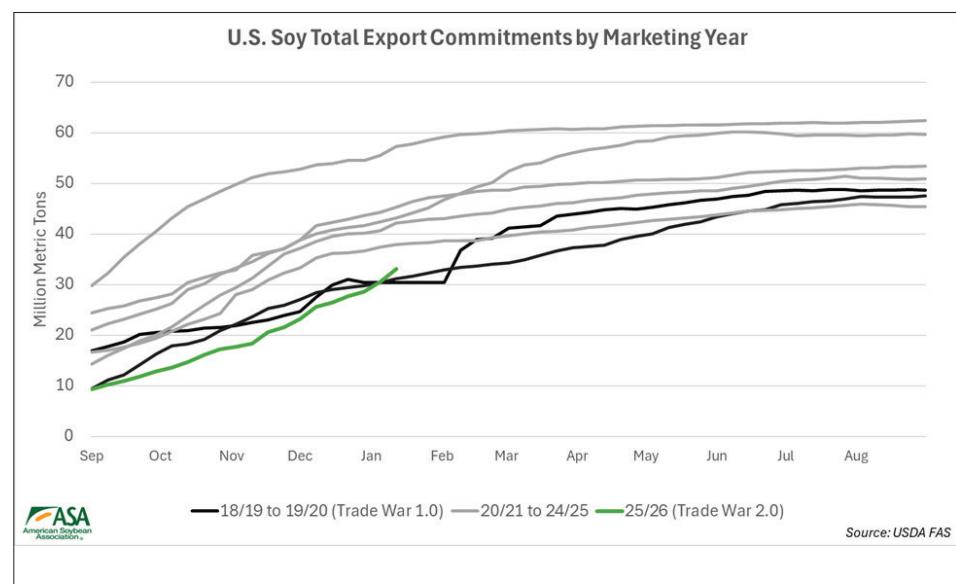

Shifting Goalposts on China Purchase Commitments

Global trade issues for soybeans started in February with tariffs placed on China, Canada and Mexico under the International Emergency Economic Powers Act (IEEPA). China responded with a 10% additional tariff on U.S. soybeans and a 10% universal baseline tariff on all U.S. exports, bringing U.S. soy's tariff differential to 20%. Tariffs from both countries escalated until Oct. 30 when Presidents Trump and Xi met in Busan, South Korea.

From the end of May 2025 to the end of November, the U.S. exported no soybeans to China. During this time, China depended on Brazil to continue imports. Additionally, the U.S. government announced negotiations on a \$20 billion currency swap to Argentina in September. Following the currency swap, Argentina

immediately suspended its export tax on soybeans and sold 5.1 million metric tons (MMT) to outside buyers, primarily to China, in two days. This helped China avoid purchasing U.S. soybeans for even longer.

According to the White House, the Busan summit resulted in Chinese purchase commitments for U.S. soybeans. Initially, the White House fact sheet and statements by Treasury Secretary Bessent communicated that "China will purchase at least 12 million metric tons of U.S. soybeans during the last two months of 2025 and also purchase at least 25 MMT of U.S. soybeans in each of 2026, 2027, and 2028." More recently, however, the goalpost for these purchases appears to be shifting, with Treasury Secretary Bessent and U.S. Trade Representative (USTR) Ambassador Greer indicating that the 12 MMT of purchases is

to be completed by the end of February or even "this season". If indeed the 12 MMT is all that is purchased this marketing year for soybeans (Sept. 1, 2025, to Aug. 31, 2026), that would represent about a 50% drop from export levels to China during the previous two marketing years.

About 9.4 MMT of sales have been confirmed to date in official USDA data, although sales reporting lags actual sales. For the prior two years, China had purchased an average of 20.4 MMT by this point of the marketing

year. Despite the availability of U.S. soybeans, all other destinations, including those that have not yet identified the destination country, are only up 20% or 4.0 MMT from the prior two years. Soybean export sales have now only caught up to the levels experienced during the 2018/2019 to 2019/2020 trade war. With the export window rapidly closing over the next two months for U.S. soybeans, the geopolitical issues severely stymied a critical component of

demand.

Soybean Farmers Need Biofuel Policies Finalized to Boost Domestic Demand for Soybeans and Soybean Oil

Growing domestic biofuel use has been a bright spot for the soybean industry. The U.S. crush industry has expanded by several hundred million bushels over the past few years to supply increasing amounts of soybean

see **SOYBEAN**,

oil. However, the biomass-based diesel industry faltered in early 2025 and soybean oil used in biofuel production dropped by about half. The lack of clarity in 45Z Clean Fuel Production Credit guidance and low renewable volume obligations (RVOs) caused many biodiesel facilities to idle.

The RVOs determine how much biomass-based diesel is consumed in the United States. It is one area where the Administration has an easy and quick method to increase soybean demand. EPA proposed blending levels for 2026 and 2027 in June of 2025 but has not yet finalized the rule.

EPA estimates their proposal would increase minimum BBD blend levels by 67% from 2025 to 2026. If achieved, this increase would energize biofuel markets with robust demand. It would also provide certainty to the same markets for the next two years. EPA assumes that

almost 200 million bushels per year of additional crush would be supported through the RVO.

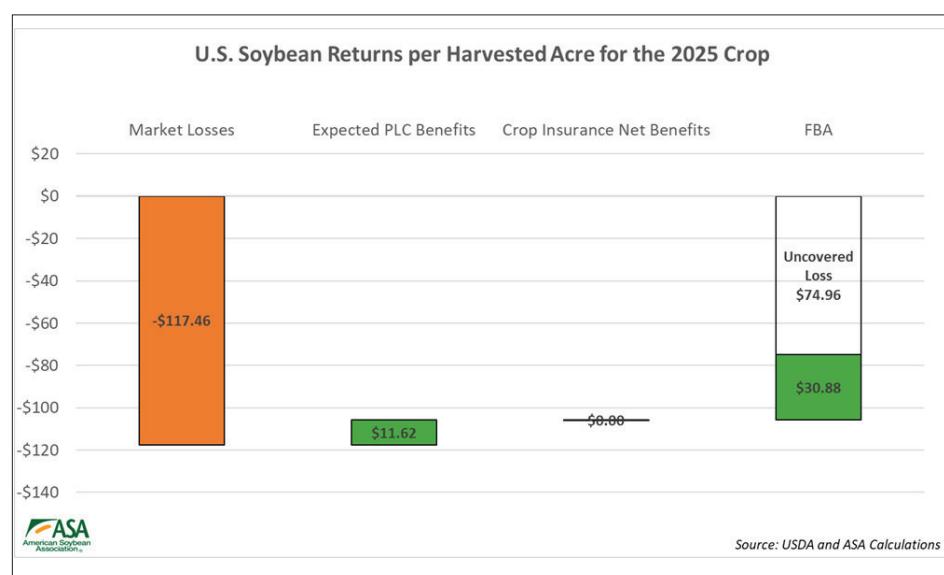

The RVO proposal included an additional feature that would also provide a shot in the arm to soy markets. Imported biofuels and biofuels produced from imported feedstocks would receive half the Renewable Identification Number credits compared to domestic biofuels produced from domestic feedstocks.

The California Low Carbon Fuel Standard (LCFS) program incentivizes use of feedstocks deemed as "waste," such as used cooking oil and tallow. The relative profitability led to a dramatic increase in their importation. In early 2025, UCO imports for biofuels almost equaled soybean oil used in biofuels. Domestic soybean oil essentially became the residual feedstock for biofuels.

Restricting credit for foreign fuels and biofuel feedstocks helps restore domestic soy as a preferred feedstock. A study funded by the United

Soybean Board showed that removing the proposed half Renewable Identification Number (RIN) credit restriction would reduce soy farmer cash receipts between \$500 million and \$2.1 billion per year, depending on the year and how EPA handles adjusting the corresponding obligations. Soybean oil use in biofuels would also fall between 200 million pounds per year to 3.3 billion pounds per year. Imports of UCO and tallow would increase by more than 2 billion pounds in all cases.

Additionally, the biofuel industry awaits final rules on the 45Z tax credit. The credit was first established in the Inflation Reduction Act in 2022 and was supposed to go into effect for on-road biofuels in 2025. Final guidance has never been released. The One Big Beautiful Bill Act in 2025 made several improvements to the tax credit by removing the indirect land use change penalty assigned to several ag feedstocks

and limiting the tax credit to domestic feedstocks. The lack of final guidance continues to plague soybean oil markets as many biofuel companies have struggled to utilize the credit. The faster final guidance is released, the sooner biofuel producers can fully incorporate the incentive.

Economic Assistance Being Provided Under USDA's Initial Farmer Bridge Assistance Program Is Disproportional to Soybean Farmer and Crop Trade Losses

Strong biofuel policies can help dampen the lost export opportunities but

cannot fully absorb the loss. If China only purchases 12 MMT of U.S. soybeans this marketing year, that will be 11.8 MMT less than has been averaged the past two years. This is about 430 million bushels compared to the 200 million bushels growth that EPA assumed would be supported by the RVO. While other countries have imported more U.S. soy this year, that is largely a shift along the demand curve due to lower prices for U.S. soy.

Due to this loss in demand from geopolitical issues, soybean farmers have suffered real losses. While it is too early at this point to fully

quantify the impact of lost sales to China, during the previous trade war, research showed that soybeans accounted for 71% of the losses at \$9.4 billion annually. Despite this, soybeans only ranked ninth in terms of payment size per acre in the recently announced Farmer Bridge Assistance program. Even when total market losses, upcoming farm bill Price Loss Coverage (PLC) payments, crop insurance, and Farmer Bridge Assistance are included, soybeans still face a loss of \$75 per acre. Of the nine largest crops based on area, this is the second largest outstanding loss on a per harvested acre basis.

USDA launches new online portal for reporting foreign-owned agricultural land transactions

Washington, D.C., — The U.S. Department of Agriculture (USDA) is launching a new online portal to streamline reporting of transactions involving U.S. agricultural land by foreign persons, which can include businesses and governments, under the Agricultural Foreign Investment Disclosure Act of 1978 (AFIDA). The new online portal is part of a broader effort to strengthen enforcement and protect American farmland as USDA continues its implementation of the National Farm Security Action Plan (PDF, 1.2 MB).

"President Trump is putting America First, and this includes increasing transparency and scrutiny of one of our most valuable national assets, American farmland. We are working to improve reporting of foreign owned land in the United States. This move to streamline the reporting portal will increase compliance and assist our

efforts to effectively enforce accurate reporting of interests held by foreign adversaries in U.S. farmland," said Secretary Brooke Rollins. "The online portal will allow us to obtain verifiable information about foreign interests in American agricultural land and protect the security of our farmers."

The new online portal is available at afida.landmark.usda.gov. Users can access the portal with Login.gov, a sign in service that provides secure online access to participate in certain government programs and reporting requirements.

The new digital portal will gather the same information found on the current form FSA-153 and those subject to filing may still file using the current FSA-153 hard copy form if desired. However, filers should not duplicate filings by using both submission options.

About the National Farm Security Action Plan

One of the key tenets of USDA's National Farm Security Action Plan (PDF, 1.2 MB) is strengthening processes around disclosure of foreign persons who have an interest in U.S. farmland. This historic plan, announced in July 2025, calls for aggressive implementation of reforms to the AFIDA process including improved verification and monitoring of collected AFIDA data. In addition to the new portal, USDA published an Advanced Notice of Proposed Rulemaking for AFIDA in December 2025.

About AFIDA

The new portal is part of USDA's efforts to streamline its process for electronic submission and retention of AFIDA disclosures, as initially required by the Consolidated

Appropriations Act, 2023. Today USDA also shared its annual AFIDA report for 2024 with Congress, which is available online. The report lists foreign holdings of U.S. agricultural land as 46 million acres, as of December 31, 2024 and includes a section on land held and acquired by China, Russia, Iran, and North Korea in recent years.

AFIDA became law in 1978, and its regulations were created to establish a nationwide system for the collection of information

pertaining to foreign ownership of U.S. agricultural land. The regulations require foreign investors who acquire, transfer or hold an interest in U.S. agricultural land to report such holdings and transactions to the Secretary of Agriculture.

The data obtained from AFIDA disclosures are used in the preparation of an annual report to Congress, which is published online.

Agricultural Foreign Investment Disclosure Act

(AFIDA) | Farm Service Ag...

The AFIDA regulations define the term "foreign person" and specifies the information that must be included in the report. AFIDA focuses on foreign persons who hold direct or indirect interest in the agricultural land, provided those foreign persons with an indirect interest have "significant interest or substantial control" in the direct interest holder.

Agricultural groups sound alarm about farmers' future

Agriculture groups sound an alarm about the economic crisis in rural America in a letter sent in January to Congress. 56 organizations representing a cross-section of agriculture signed the letter, sending a strong message to Congress.

The letter describes an existential threat looming over many farms, stating, "America's farmers, ranchers, and growers are facing extreme economic pressures that threaten the long-term viability of the U.S. agriculture sector. An alarming number of farmers are financially underwater, farm bankruptcies continue to climb, and many farmers may have difficulty securing financing to grow their next crop."

Farm losses are the result of a multitude of challenges over several years of downturns that

photo credit: North Carolina Farm Bureau, Used with Permission

have led to devastating farm losses. The letter goes on to say, "For the last three to four years the reality of record-high input costs and rapidly declining and historically low crop and specialty crop prices have culminated in many U.S. farmers experiencing negative margins and losses approaching one hundred billion dollars nationwide... These trends aren't just statistics; they represent an economic crisis in

rural America."

The letter, organized by the American Farm Bureau Federation, acknowledges—and expresses appreciation for—the significant investments over the past year in farm programs, a bridge assistance program, and other aid to support farmers. It also notes that losses for commodity crops and specialty crops remain deep and the gap needs to be closed, saying, "In addition to continuing to pursue federal policies to increase long-term domestic demand for U.S. agricultural commodities, we urge Congress to provide immediate economic support to fill in the gap of remaining losses for both field and specialty crop farmers."

Farmers appreciate that members of Congress on both sides of the aisle have acknowledged the deep losses on family farms and the need for additional aid. Today's letter emphasizes the urgency of the economic crisis as farmers question whether they can afford to plant another crop. Stabilizing the farm economy benefits all Americans by ensuring our food supply remains strong and secure.

John Deere bets big on Indiana: \$125M distribution center planned for Lake County

By C.J. Miller

John Deere has recently broken ground on a \$125 million distribution center in Lake County in northwestern Indiana.

Hoosier Ag Today first reported on this project in July 2024, with John Deere purchasing the property for the site at the time for \$7 million.

The 1.2 million-square-foot distribution center is being built on 234 acres off of I-65, near the cities of Lowell and Hebron. The facility is planned at 2105 W. 181st Avenue—just southwest of the interchange of I-65 and State Road 2.

According to a release from Gov. Mike Braun's office Tuesday evening, the new facility is expected to create 150 jobs, each expected to pay above the county's current average wage.

"Our state's location as the Crossroads of America makes it the ideal destination for companies of all sizes to serve customers

across the U.S. and around the world," said Gov. Braun in a statement. "John Deere's expansion to Indiana is a testament to our business-first environment, our robust manufacturing sector, and our strong pipeline of skilled talent."

The site of the future 1.2 million-square-foot distribution facility for John Deere. The site is located near the interchange of I-65 and State Road 2 near Lowell in Lake County. Photo courtesy of Coldwell Banker Commercial Realty.

John Deere says their new facility is strategically located to enhance their supply chain capabilities nationwide, and will be designed to streamline operations and ensure timely delivery of equipment and parts.

The company says it will continue to maintain its primary North American Parts Distribution Center in Milan, Illinois, which has

been in operation since 1973 and employs about 1,200 people.

John Deere adds that its expansion to Indiana is part of their commitment to invest \$20 billion in U.S. manufacturing over the next 10 years.

The Indiana Economic Development Corp. (IDEC) has committed \$2.5 million in incentive-based credits to the project, according to the Governor's Office. The company will be eligible to claim those state benefits once its planned investments are made and employees are hired.

President Trump mentioned John Deere's plans during an appearance in Clive, Iowa, on Tuesday. The Indiana facility is one of two that has been announced by the company. John Deere says it also plans to build a \$70 million manufacturing facility in Kernersville, North Carolina, that will produce excavators previously produced in Japan.

Apply now for the 2026 ASA, Valent Ag Voices of the Future Program

The American Soybean Association is accepting applications for the Valent and ASA Ag Voices of the Future program, which will be held July 13-16 in conjunction with the ASA summer board meeting and Soy Issues Forum in Washington, D.C.

The Ag Voices of the Future program

is for students who are passionate about agriculture and interested in expanding their understanding of key agricultural policy issues, the critical role of advocacy, and the wide array of career opportunities in agricultural policy. Class size is limited, and students must be at least 18

years old on or by July 13 to apply. Select students from the 2026 Ag Voices of the Future program will be awarded a scholarship to participate in the Agriculture Future of America Leaders Conference, Nov. 12-15, 2026, in Kansas City, Missouri. The scholarship covers

conference registration fees and travel expenses. Students must submit their online application by March 5, 2026. To apply for the ASA and Valent Ag Voices of the Future program and be considered for a scholarship to the AFA Leaders Conference, click here, then click the

"Apply Now" button. To be considered for the Ag Voices of the Future Program, students should check the box on the application form that reads, "I have an interest in agriculture policy and would like to be considered for the ASA and Valent Ag Voices of the Future Program (July 13-16

in Washington, D.C.) and an AFA Leaders Conference Scholarship."

If a student has already applied for the AFA Leaders Conference, they can modify their application to check the box for the Ag Voices of the Future program.

FARMERS' Quarterly

NATIONAL FARM MACHINERY SHOW ISSUE

National FFA week set for Feb. 21-28

National FFA Week is coming up fast, landing this year from Feb. 21 to 28, 2026, and chapters across the country are already lining up ways to celebrate agricultural education, leadership development, and the real-world impact FFA has on students and their communities.

The National FFA Board of Directors originally designed the weeklong tradition in 1948. The weeklong celebration intentionally encompasses George Washington's birthday on February 22, recognizing his legacy as an agriculturalist and farmer.

The week is built for storytelling, too. Whether you're an FFA member, alum, parent, supporter, or local partner, it's a

great time to share what the blue jacket means in your hometown. National FFA encourages participants to post their photos and memories using #FFAWeek, helping spotlight the program far beyond the classroom.

Several themed days anchor the celebration. Alumni Day (Tuesday, Feb. 24) is a natural opportunity for chapters to recognize the people who helped build their programs — from handwritten thank-you notes and meals to simple shout-outs that highlight long-time supporters.

Give FFA Day follows on Thursday, Feb. 26, encouraging donations and community backing for local chapters and member opportunities. The

week wraps up with Wear Blue Day on Friday, Feb. 27, when members and supporters are asked to show their FFA pride, snap a photo, and tag National FFA alongside the #FFAWeek hashtag.

National FFA Week also ties into fundraising at the local level. Supporters can purchase \$1 paper emblems at Tractor Supply Co. during the week, benefiting the Grants for Growing program, and many chapters are encouraging participants to share a "paper emblem selfie" as another easy way to spread the message.

On the chapter side, the plans range from school spirit to community outreach. Neodesha FFA in Kansas, established in 1936 with more

than 100 active members today, is promoting a full slate of activities, including a spirit week, a community breakfast with free-will donations, and an alumni work auction.

In Texas, Wylie East FFA is leaning into dress-up days as a fun way to build momentum in the hallway while rewarding participation through chapter points.

Agribusiness partners are getting involved as well: Illinois-based Prairieland FS is inviting eligible chapters to create short videos explaining why cooperatives matter in local agriculture, with prize money for the most-engaged entry shared on social media during the week.

National FFA WEEK	
Saturday:	Happy National FFA Week!
Sunday:	SAE Sunday
Monday:	National Days of Service
Tuesday:	FFA Alumni Day
Wednesday:	Ag Teacher Appreciation Day
Thursday:	Give FFA Day
Friday:	National Wear Blue Day
Saturday:	National FFA Week Ends

National FFA Week Image courtesy of the National FFA Organization

For chapters still pulling ideas together, National FFA has planning tools available including activity logs, templates, an updated FFA Week logo, and ready-to-post social media kits designed to make promotion easier and more consistent.

No matter how a chapter marks it, National FFA Week is a reminder that FFA is more than a line on a schedule, it's a pipeline for the next generation of producers, ag educators, innovators, and rural leaders.

New analysis reinforces urgent need for additional farm support

American Farm Bureau President Zippy Duvall highlights the urgent need for legislation expanding the bridge support program for farmers, reinforced by new analysis indicating the economic crisis in farm country is likely to continue this year.

"We are grateful for the aid Congress has delivered to farmers this year and do not take that for granted. But we are in an economic crisis, the likes of which we haven't seen in decades. New Farm Bureau analysis reveals farmers are likely to face another

very difficult year if markets do not improve. The sad reality is the climbing rate of farm bankruptcies and further consolidation of farms is only going to accelerate if Congress fails to act.

"Members of Congress on both sides of the aisle have assured us in recent weeks that they recognize more aid is needed to keep our food supply strong, which requires a strong agricultural sector. Many have also voiced strong support for approving year-round E15 fuel, which would be a win-win for

photo credit: North Carolina Farm Bureau, Used with Permission

consumers and farmers by reducing the price of fuel at the pump while increasing demand for

both corn and sorghum. "The target for months has been to include both priorities

neither. There is still time. Congress must act. Failing to do so would not only fail farmers, who don't control the prices they're paid or the skyrocketing cost of supplies, it would fail every family in America who relies on farmers to provide safe and healthy food to stock their pantries.

"We know much work is yet to be done for a legislative package to reach the finish line. The importance of including a lifeline for farmers, which translates to food security for families across America, cannot be overstated."

AGRICULTURE & BUSINESS OUTLOOK

Leave the Wire: *Turning Decisions Into Action for 2026*

By Alan Hoskins
President and National
Director of Sales
American Farm Mortgage &
Financial Services

A few years ago, someone posed what seemed to be a reasonably simple math problem. The question was: "Ten birds are sitting on a wire, and three decide to leave. How many birds remain?" It sounded straightforward. Having mastered elementary school math (or "grade school," as we called it), I confidently replied, "Seven." The individual responded, "That's not correct."

I disagreed—after all, ten minus three is seven. The person then explained that the correct answer was ten. Confused, I asked how that could be possible. The explanation was simple: while three of the birds had decided to leave, none had yet taken action. Since no action had occurred, all ten birds remained on the wire. While this story may be interesting—or even entertaining—what relevance does it have to agricultural producers? I believe the answer is: quite a lot.

As harvest concludes and producers begin evaluating the 2025 production year, many are facing significant challenges. These may include substantially higher input costs, commodity prices below the cost of production, and/or below-average yields—just to name a few. For some, these conditions represent the most severe downturn experienced in many years; for others, this may be their first encounter with a cycle of this magnitude. In either case, success will require more than simply deciding to change. Meaningful improvement demands action—supported by a clear implementation plan and a defined, measurable outcome. Saying "I am going to change" rarely leads to success without identifying specific steps to achieve that goal.

For example, a producer may choose to evaluate soil test results to determine fertilizer application rates for the upcoming year. If a decision is made to reduce fertilizer usage, what is the anticipated financial impact based on projected yields and estimated 2026 commodity prices? While I recognize that yield and price are variables that cannot be predicted with certainty, the pursuit of perfection should not become a barrier to progress.

Additionally, while decisions may ultimately rest with one individual or a small leadership group, the responsibility for strategy development should not fall on them alone. I strongly encourage producers to seek input from trusted advisors—crop consultants, insurance agents, accountants, and bankers—to gain additional perspectives and identify opportunities for improvement. Finally, be thoughtful about the number of significant changes implemented at one time. While today's challenges may feel overwhelming, focusing on a limited number of changes that deliver the greatest improvement in profitability or efficiency is often more effective. It has been said that prioritizing more than three major organizational changes at once can dilute focus and reduce overall success.

Navigating periods of uncertainty is never easy. However, drawing upon both your own experience and the insights of those around you can help illuminate the path forward. As you plan for the months ahead, I encourage you not only to decide to change—but to leave the wire and take action.

American Farm Bureau establishes 2026 policies

New Grassroots Leaders Also Elected

In January, farmer and rancher delegates to the American Farm Bureau Federation's 107th Convention adopted policies to guide the organization's work in 2026. Key topics ranged from labor to animal health to risk management.

For the fourth year, delegates were polled during the voting session regarding their farms. The results show almost 99% of those who cast votes operate family farms and more than two-thirds represent small- to mid-size farms as defined by USDA. Today's discussion highlighted the fact that farmers across the spectrum and across the country are struggling.

"America's farmers and ranchers are facing unprecedented challenges in agriculture, including high supply costs, trade imbalances, and low commodity prices. Today, our members gave us clear guidance on how we should address those challenges in the coming year," said AFBF President Zippy Duvall. "Farm Bureau's strength was on display today, as our grassroots set the policy for this organization. We look forward to taking their stories to leaders in Washington, as we work to ensure farmers and ranchers can continue to fill

pantries for families across the country."

Delegates adopted policy to improve labor programs to meet the needs of America's farmers and ranchers, including formalizing support for the new Adverse Effect Wage Rate methodology, and further revisions to avoid unpredictable rate swings in the future.

They voted to support federal funding for research and biosecurity facilities to better identify and combat illnesses and pests that threaten the health of crops and animals.

New policy also includes committing more resources specifically to eradicate the New World screwworm, and keeping the U.S.-Mexico border closed to cattle trade until the screwworm is controlled.

Delegates revised national farm policy to provide more protection for dairy farmers who may suffer losses due to market challenges.

Delegates also formalized support for prioritizing locally grown fruits, vegetables, bread, and proteins in institutional purchases such as schools and government facilities.

Voting members also requested that the board of directors analyze several agricultural issues,

photo credit: AFBF Photo

including the impact of tariffs and the lack of affordable insurance options for poultry farmers.

Farm Bureau Leadership Elections

Beyond policy changes, AFBF President Zippy Duvall and Vice President Scott VanderWal were unanimously re-elected for another two-year term.

Delegates also elected members to serve on the AFBF board of directors and national program committees. Stacy Simunek, Oklahoma (Southern Region), was elected to fill a one-year term on the AFBF board of directors. Joyce Brady, New Hampshire (Northeast Region), and ValJay Rigby, Utah (Western Region), were elected to two-year terms.

Rigby, Utah (Western Region), were elected to two-year terms.

Eleven other state Farm Bureau presidents were re-elected to two-year terms to represent their regions on the board. From the Midwest Region—Garrett Hawkins, Missouri; and Mark McHargue, Nebraska. From the Northeast Region—Chris Hoffman, Pennsylvania. From the Western Region—Carlyle Currier, Colorado; and Rosella Mosby, Washington. From the Southern Region—Eddie Melton, Kentucky; Harry Ott, South Carolina; Jimmy Parnell, Alabama; Scott Sink, Virginia; Jeb Smith, Florida; and Dan Wright, Arkansas.

National Program Committees

Julie Hardy of Georgia (Southern Region) was elected to a two-year term on the Women's Leadership Committee. Mindy Orschell of Indiana (Midwest Region), Dot Jensen of Utah (Western Region) and Jennifer Cross of Maryland (Northeast Region) were re-elected to two-year terms.

Heidi Cooper of Massachusetts was elected chair, Steve Breeding of Delaware was elected vice chair and Lynn Leahy of Wisconsin was elected secretary of the Promotion & Engagement Committee. They will each serve one-year terms.

Tommy Salisbury of

Oklahoma was elected chair, Cleve Jackson of Georgia was elected vice chair and Katie Wiese of Minnesota was elected secretary of the Young Farmers & Ranchers Committee.

They will each serve one-year terms beginning in March at the end of the YF&R Conference.

AFBF appreciates the 110 speakers and 4,500 registered attendees who helped make the 2026 Convention such a success.

Planning for the American Farm Bureau's 2027 Convention has already begun. Mark your calendar to join us Jan. 8-13, 2027, in Charlotte, North Carolina.

John Deere announces U.S. expansion following year of big layoffs

John Deere announced plans to open two new U.S.-based facilities — in Indiana and North Carolina — an expansion the company says will create more than 300 jobs and increase its domestic manufacturing and distribution capacity.

The announcement comes as the equipment maker has faced scrutiny over workforce reductions in the Midwest and questions from farmers and lawmakers about its long-term commitment to U.S. manufacturing amid expanded operations in Mexico.

The expansion includes a new parts distribution center near Hebron, Indiana, and a new excavator manufacturing facility in Kernersville, North Carolina. Both facilities are expected to open within the next year.

John Deere S7 Combine Image by John Deere

"Our investment in these new facilities underscores John Deere's dedication to strengthening the backbone of American industry and supporting local economies," said John May, chairman and chief executive officer of John Deere. "We believe in building America, and these projects represent our

intent to continue driving innovation and job creation in the United States."

Indiana parts distribution center

John Deere recently broke ground on a new distribution center near Hebron, Indiana, aimed at strengthening the company's supply chain and improve

parts availability nationwide. The facility is expected to employ approximately 150 workers.

"This new facility is an investment in customer expectations around world class product support through parts availability for our US based ag, turf, construction, forestry, mining and turf

customers," said Denver Caldwell, vice president, Aftermarket and Customer Support. "Indiana's strong workforce and central location make it an ideal choice for expansion."

John Deere will continue to operate its primary North American Parts Distribution Center in

Milan, Illinois, which has been in operation since 1973 and employs approximately 1,200 people.

Excavator manufacturing facility in North Carolina

The company also announced plans for a \$70 million excavator manufacturing facility in Kernersville, North Carolina. The plant will produce future-generation excavators for the construction market, with production shifting from overseas manufacturing to the United States.

The North Carolina facility is expected to employ more than 150 people and will utilize advanced manufacturing technologies to support equipment demand and domestic production.

Beef Expo set for March 6th - 8th

By Kentucky Agriculture Commissioner Jonathan Shell

Over the years, we've seen ups and downs in the beef cattle industry.

In 2025, we saw a rebounding of the market. Cattle prices were up more than 25 percent for much of the year, offsetting the fact that there were fewer animals on the market. Cattle and calves brought in more than \$1.5 billion in cash receipts, making it one of Kentucky's top commodities.

The cattle industry's strong showing for 2025 helped contribute to the overall agricultural sales for the state, which economists at the University of Kentucky anticipate will be near the \$8.3 billion record mark.

These numbers show how important agriculture is to the state of Kentucky and cattle producers are a large reason for that. The nearly 1 million head of beef cattle in the Commonwealth and the more than 31,000 farms with beef cattle, solidifies cattle among Kentucky's top commodities.

As a cattle farmer myself, I know firsthand the hard work that goes into the beef industry from bottle-feeding calves to fighting the weather. It is that experience that forms my deep appreciation for the farmers across Kentucky who make this their passion year after year. Without their continued efforts Kentucky would not have the great agricultural community that makes it stand out amongst other states. Farming is integral for our state and cattle farmers are a large part of the equation.

This year marks the 40th anniversary of the annual Kentucky Farm Bureau Beef Expo. As the largest beef cattle state east of the Mississippi River, Kentucky is blessed to have this event as a staple on our agriculture calendar each year. The expo will take place March 6-8 in the West Wing of the

Kentucky Exposition Center in Louisville, a prime facility for livestock events.

A lot of work goes into making the Beef Expo possible every year, including the many hours Kentucky Venues CEO David

Beck and his team put into hosting this event.

The Beef Expo evolved from earlier cattle events, officially forming as the Kentucky Beef Expo in 1987. Combining various breed shows into one major event

reduced costs while showcasing top genetics for breeders and buyers in one place. The expo's roots trace back to the Kentucky Angus Sweepstakes in 1947 and a general livestock show planned by the

Kentucky Department of Agriculture starting in 1974, with the goal of promoting quality cattle and boosting the state's beef industry.

Every year at the Beef Expo, Kentucky cattle producers show

and sell some of the best cattle in the country to buyers looking to upgrade their genetics or take home a show project. This event is truly the place to be for the beef industry on the first weekend of March.

KingFisher and Red Tail corn is selected for superb fiber digestibility and top-shelf agronomics

- **FiberGest** - High sugar and stalk density means highly digestible corn silage
- **SofStarch** - Highly-digestible starch, excellent rumen retention and digestibility
- **Agronomics** - Top-notch agronomics paired with ear flex and stalk expansion means more digestible starch and fiber harvested per acre

Don't miss out on the consistent digestible energy of KingFisher and Red Tail corn.

EXPANSION,
from page D4

bring this new facility to our Kernersville campus and to be part of the region's thriving manufacturing community," said Ryan Campbell, president Worldwide Construction and Forestry and Power Systems. "Our focus will be on delivering excellence, creating jobs, and advancing the legacy of John Deere in American manufacturing."

Expansions follow workplace reductions

The announcement follows a year of significant workforce reductions across several John Deere facilities, particularly in Iowa and Illinois. Since April 2024, the

company has eliminated roughly 2,200 jobs in Iowa alone, citing lower equipment demand and challenging agricultural market conditions.

In September 2025, John Deere confirmed additional layoffs affecting more than 140 employees at its Waterloo and Ankeny, Iowa, operations. The company has said production schedules are adjusted based on seasonal demand and order volumes.

At the same time, Deere has faced criticism from some farm groups and policymakers over expanding manufacturing operations in Mexico, raising concerns about the balance between domestic and international

production. Company executives have maintained that recent investments signal a long-term commitment to U.S. manufacturing. During a 2025 earnings call, John Deere reaffirmed plans to invest approximately \$20 billion in U.S. operations over the next decade, including factory upgrades, workforce development, and new production capacity.

"These investments reflect our confidence in the future of U.S. manufacturing and our commitment to innovation, quality, and job creation," said John May, chairman and chief executive officer of John Deere.

Kennedy, Rollins unveil historic reset of U.S. Nutrition Policy, put real food back at center of health

Washington, D.C., — U.S. Department of Health and Human Services Secretary Robert F. Kennedy, Jr. and U.S. Department of Agriculture Secretary Brooke Rollins today released the Dietary Guidelines for Americans, 2025–2030, marking the most significant reset of federal nutrition policy in decades. The new Guidelines deliver a clear, common-sense message to the American people: eat real food.

The U.S. faces a national health emergency. Nearly 90% of health care spending goes toward treating chronic disease, much of it linked to diet and lifestyle. More than 70% of American adults are overweight or obese, and nearly 1 in 3 adolescents has prediabetes. Diet-driven chronic disease now disqualifies many young Americans from military service, threatening national readiness and limiting opportunity.

"These Guidelines return us to the basics," Secretary Kennedy said. "American households must prioritize whole, nutrient-dense foods—protein, dairy, vegetables, fruits, healthy fats, and whole grains—and

dramatically reduce highly processed foods. This is how we Make America Healthy Again."

"Thanks to the bold leadership of President Trump, this edition of the Dietary Guidelines for Americans will reset federal nutrition policy, putting our families and children first as we move towards a healthier nation," Secretary Rollins said. "At long last, we are realigning our food system to support American farmers, ranchers, and companies that grow and produce real food.

Farmers and ranchers are at the forefront of the solution, and that means more protein, dairy, vegetables, fruits, healthy fats, and whole grains on American dinner tables."

Under President Trump's leadership, the Administration is restoring scientific integrity, accountability, and common sense to federal health guidance. The 2025–2030 Guidelines reestablish food—not

pharmaceuticals—as the foundation of health and reclaim the food pyramid as a tool for nourishment and education.

The Guidelines emphasize simple,

flexible guidance rooted in modern nutrition science:

Prioritize protein at every meal

Consume full-fat dairy with no added sugars

Eat vegetables and fruits throughout the day, focusing on whole forms

Incorporate healthy fats from whole foods such as meats, seafood, eggs, nuts, seeds, olives, and avocados

Focus on whole grains, while sharply reducing refined carbohydrates

Limit highly processed foods, added sugars, and artificial additives

Eat the right amount for you, based on age, sex, size, and activity level

Choose water and unsweetened beverages to support hydration

Limit alcohol consumption for better overall health

The Guidelines also provide tailored recommendations for infants and children, adolescents, pregnant and lactating women, older adults, individuals with chronic disease, and vegetarians and vegans, ensuring nutritional adequacy across every stage of life.

Farmers applaud return of whole milk to schools

American Farm Bureau Federation President Zippy Duvall commented on President Trump signing the Whole Milk for Healthy Kids Act into law.

"Farmers applaud Rep. GT Thompson and Senator Roger Marshall for working

to return whole milk to America's schools, and to the president for signing the legislation last month. The commonsense, bipartisan bill ensures children will have access to important vitamins, protein and other nutrients while supporting dairy

farmers who need access to expanded markets for their product.

"America's farmers as a whole are struggling with high expenses that outpace income. Finding a solution that benefits everyone without creating extra costs

for taxpayers is innovative and a sign of good government. Farm Bureau is committed to working with the administration to find more solutions to keep farmers in business and increase affordability for America's families."

photo credit: Getty

U.S. pork producers pleased new dietary guidelines put pork front and center on plate

WASHINGTON, D.C. — The National Pork Producers Council applauds the U.S. Department of Health and Human Services and the U.S. Department of Agriculture's release of the 2025-2030 Dietary Guidelines for Americans, which encourage Americans to "consume a variety of protein foods from animal sources, including eggs, poultry, seafood, and red meat."

"America's pork producers appreciate the 2025 Dietary Guidelines putting pork front and center on the plate. They took note of producer

concerns and rightly gave pork and other high-protein, nutrient-dense, and delicious meats their due when it comes to Americans' health and dietary habits," said Rob Brenneman, NPPC president-elect and pork producer from Washington, Iowa.

Quintessentially American foods like pork chops and Easter hams can remain a staple of American households, and the guidelines go so far as to recommend parents introduce nutrient-dense foods including meat early and continue focusing on "nutrient-dense foods

such as protein foods" throughout childhood.

NPPC has long advocated for sound science, including how the Dietary Guidelines are developed. The "upside down" pyramid released by the administration encourages consumers to feel good about eating and enjoying their protein as part of a healthy, balanced diet, and America's pork producers are proud to play a part in their wellbeing by providing readily available, affordable, enjoyable pork products.

NPPC will continue to review the new guidelines and work with the Trump administration to ensure future food policy decisions serve the health and nutrition interests of the American public and that pork continues to play a vital part.

ASA urges balance on agricultural drone policy

The American Soybean Association is closely monitoring recent federal actions related to restrictions on certain foreign-manufactured drones used in U.S.

agriculture and the potential impacts on farmers. Precision agriculture tools, including drones, are essential for today's farmers to manage costs, monitor crops, and operate efficiently. Foreign-manufactured drones represent a significant majority of the agricultural drone market, and sudden restrictions on their use without available domestically manufactured alternatives risk adding new financial and operational

burdens for farmers already facing tight margins and market uncertainty.

"Soybean farmers depend on modern

technology to stay competitive, efficient, and sustainable," said Scott Metzger, president of ASA and Ohio farmer. "While

we recognize the importance of addressing national security concerns, it's critical that policymakers fully

consider the real-world impacts these decisions can have on farmers who rely on these tools every day. Taking proven

technology out of farmers' toolboxes without workable alternatives only adds cost and uncertainty at a time when farmers can least afford it."

ASA has consistently supported policies that protect farmers' access to reliable technology, broadband connectivity, GPS systems, and spectrum resources critical to modern agriculture. We urge policymakers and federal agencies to work with agriculture stakeholders to address security concerns while preserving farmers' access to essential tools.

USDA accepting applications for the 1890 National Scholars Program

WASHINGTON, DC

— The U.S. Department of Agriculture (USDA) is now accepting applications for the USDA 1890 National Scholars Program, which aims to encourage students at the Congressionally created 1890 land-grant universities to pursue careers in food, agriculture, and natural resource sciences. The application deadline is March 8, 2026.

Students around the country are invited to complete and submit their applications online through an online application. The USDA 1890 National Scholars Program is available to eligible high school seniors entering their freshman year of college that will attend one of the 1890 land-grant universities and pursue degrees in agriculture, food, natural resource sciences, or related academic disciplines. The program is also

open to rising college sophomores and juniors that meet the same criteria.

"Our land-grant universities, especially our 1890 land-grants, are critical in educating the next generation of agriculturists, and the USDA 1890 National Scholars Program supports this effort by providing students with real-world work experience and support for their education. Now more

than ever we need to encourage our young people to join the noble and fulfilling profession of farming and feeding our fellow citizens," said U.S. Secretary of Agriculture Brooke L. Rollins. "President Trump has made it a priority to promote excellence at Historically Black Colleges and Universities, and USDA is proud to further these efforts through this important

program." This program is a partnership between USDA and the 19 land-grant universities that were established under the Morrill Land Grand Act of 1890. Scholars accepted into the program will get work experience at USDA through summer internships and will also receive financial support from USDA for their education.

The USDA 1890 National Scholars

Program supports Executive Order 14283, White House Initiative to Promote Excellence and Innovation at Historically Black Colleges and Universities, and continues USDA's long history of developing leaders and providing support to public land-grant universities to build the next generation of the agricultural workforce.

White House Initiative to Promote

Excellence and Innovation at Historica...

By the authority vested in me as President by the Constitution and the laws of the United States of America, it ...

The 19 members of the 1890 universities system are: Alabama A&M, Alcorn State University, Central State University, Delaware State University, Florida A&M University, Fort Valley State University, Kentucky State University, Langston University, Lincoln University, North Carolina A&T State University, Prairie View A&M University, South Carolina State University, Southern University and A&M College, Tennessee State University, Tuskegee University, University of Arkansas Pine Bluff, University of Maryland Eastern Shore, Virginia State University and West Virginia State University.

New dietary guidelines emphasize beef's place in a healthy diet

WASHINGTON — In January, the National Cattlemen's Beef Association (NCBA) welcomed the release of the 2025-2030 Dietary Guidelines for Americans (DGAs). The updated DGAs nearly double the recommended daily amount for protein intake, increasing it to 1.2-1.6 grams per kilogram body weight, depending on your age group and individual caloric needs. The document focuses on building a healthy diet around whole foods, limiting highly processed foods and added sugars, and prioritizing protein at every meal like nutrient-dense beef. Red meat is specifically mentioned as a healthy source of protein in a varied, balanced diet.

balanced diet. "As a mom, I understand the importance of eating nutritious wholesome protein and as a rancher, I see the hard work that goes into providing the best possible food for our communities. The updated and

simplified Dietary Guidelines will help more families like mine learn the facts about beef's nutritional value and make the best decisions when they're shopping for a nutrient-rich, whole, and delicious protein," said Kim Brackett, an Idaho rancher and NCBA vice president. "Beef provides high amounts of protein plus nine other essential nutrients like iron and B vitamins, and gold-standard clinical studies have consistently shown that it is easy to incorporate beef into a balanced, heart-healthy diet. We appreciate Secretary Rollins and Secretary Kennedy underlining the role of beef as an important part of a healthy diet."

The Dietary Guidelines released today are simplified and more consumer-friendly than previous cycles. The streamlined approach taken by Secretary of Agriculture Brooke Rollins and Secretary

A large, perfectly cooked ribeye steak is the central focus, resting on a dark slate board. The steak is sliced into several pieces, revealing a juicy, pink interior. To the left, a bag of chips sits next to the meat. To the right, a bunch of fresh, ripe red tomatoes is accompanied by a small dollop of mustard and some fresh herbs. The entire arrangement is set on a rustic wooden table.

of Health and Human Services Robert F. Kennedy, Jr. keeps science-backed recommendations at the heart of the DGAs, but makes them far more practical for the families, caregivers, school administrators and medical professionals who are making decisions every day about what to feed our children, seniors and Americans of all ages. Other recommendations in the DGAs include: Incorporate beef tallow and other

healthy fats into the cooking process. Use healthier cooking methods like baking, broiling, roasting, stir-frying, or grilling, all of which can be used with the wide variety of retail beef cuts available to American families.

Introducing nutrient-dense foods like meat during infancy and early childhood to support growing children.

Although much discussed in recent months, the DGAs do not make any changes

to the existing recommendation that saturated fats should not make up more than 10 percent of daily calories. The guidelines do note that healthy fats are a natural part of real foods like meat, and these fats support many important functions in the body like nutrient absorption.

“As Americans face the double burden of being overfed and undernourished, they are searching for reliable, affordable solutions to meet their absorption.”

nutritional needs and personal preferences. Thankfully, there are a wide range of beef options in the marketplace,” said Registered Dietitian and nutrition scientist Dr. Shalene McNeill, executive director of nutrition science for NCBA. “On a per-gram basis, beef offers more nutrient value than many other animal and plant options. Incorporating beef in the diet can help support the overall health and well-being for all Americans.”

USDA names new leadership of the Animal and Plant Health Inspection Service

Agency remains committed to mission delivery and continuity of service to U.S. agriculture

In January, the U.S. Department of Agriculture (USDA) announced important leadership changes within the Animal and Plant Health Inspection Service (APHIS). Dr. Michael Watson, APHIS Administrator, will retire at the end of January after decades of distinguished service, and Dr. Rosemary Sifford, Deputy Administrator for Veterinary Services and U.S. Chief Veterinary Officer, has recently retired from federal service after a similarly notable career. Beginning on February 1, 2026, Ms. Kelly Moore will serve as Acting Administrator and effective immediately, Dr. Alan Huddleston will serve as the Acting U.S. Chief Veterinary Officer. Additionally, to ensure continuity during this transition, APHIS Veterinary Services Associate Deputy Administrator Dr. Adis Dijab will continue to provide operational oversight of Veterinary Services.

APHIS operations continue uninterrupted, guided by science-based policies, strong stakeholder engagement, and experienced acting leaders to ensure program continuity. APHIS remains steadfast in its mission to protect the health, welfare, and value of our Nation's plants, animals, and natural resources—continuing to deliver solutions and essential services that safeguard U.S. agriculture and support stakeholders nationwide.

"Dr. Watson and Dr. Sifford are dedicated public servants and we greatly appreciate their time at USDA, serving American farmers and ranchers, and protecting the national security of the United States. I am so grateful for their extended service to support the Trump Administration during such a critical time for American agriculture," said U.S. Secretary of Agriculture Brooke L.

Rollins. "The team at APHIS plays a critical role in protecting our food supply from foreign pests like the New World Screwworm, as well as fighting diseases like bird flu. I have the utmost confidence in Ms. Moore, Dr. Huddleston, and Dr. Dijab in continuing this critical mission and defending American agriculture."

"Dr. Watson and Dr. Sifford exemplify the best of public service. Their leadership and commitment to collaboration strengthened APHIS and the nation's animal and plant health systems," said Dudley Hoskins, Under Secretary for Marketing and Regulatory Programs. "These are consequential changes at a pivotal moment for the agency, and I am confident that Ms. Moore, Dr. Huddleston, and Dr. Dijab will not only serve as steady hands for program continuity but will lead APHIS into a new era."

Dr. Watson's notable career reflects his unwavering commitment to safeguarding U.S. agriculture, building strong partnerships with States and stakeholders, and mentoring future leaders. Beginning his USDA career in 1994 as a plant pathologist with the Agricultural Research Service, he later held key leadership roles across multiple APHIS programs. Dr. Watson consistently championed science-based policy, ensuring APHIS decisions were grounded in rigorous data and research to protect U.S. agriculture and maintain public trust. His legacy is one of collaboration, integrity, and dedication to public service. Dr. Watson will remain with APHIS until January 31 to facilitate a seamless handoff to the incoming Acting Administrator, ensuring continuity and stability during this leadership

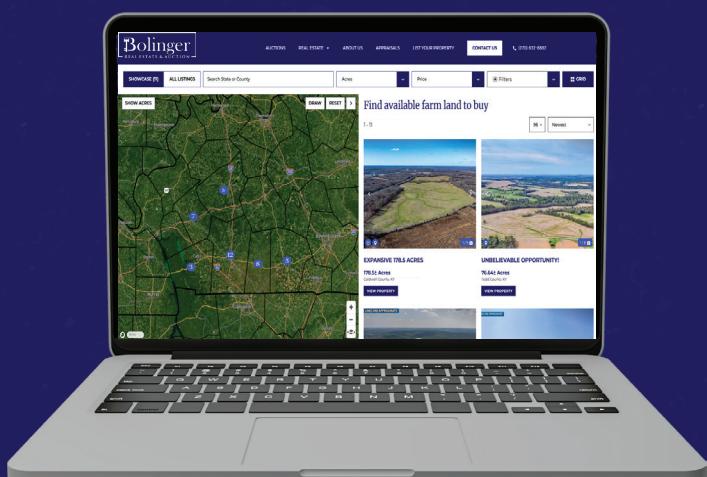

transition. Ms. Moore is currently Acting Chief Operating Officer for USDA's Marketing and Regulatory Programs mission area and Acting Deputy Administrator of Marketing and Regulatory Programs Business Services. She brings extensive operational leadership experience and results-driven management, including a strong foundation of discipline from her prior service in the U.S. Marine Corps. Ms. Moore is highly adept at guiding organizations through periods of change and transition and driving efficiency, compliance, and innovation at scale—critical to APHIS's mission during this pivotal time.

Dr. Sifford began her USDA career in 1997 as a Saul T. Wilson Scholar and held numerous roles across APHIS. Under her leadership and guidance, APHIS advanced major animal

health efforts, including combatting highly pathogenic avian influenza—with unprecedented detections in dairy cattle—and strengthening preparedness and response for New World Screwworm. Her direction ensured these efforts were grounded in science-based policy, supported by field-ready guidance, and delivered with transparent stakeholder engagement. A steadfast champion of practical, proven biosecurity, Dr. Sifford worked closely with States and industry to protect animal health nationwide.

Dr. Alan Huddleston will serve as Acting U.S. Chief Veterinary Officer. With deep expertise in epidemiology and program development, Dr. Huddleston will represent U.S. animal health priorities internationally and maintain strong engagement with States and industry.

Farm Bureau names 2026 Farm Dog of the Year

Recognizing the vital role that four-legged friends often play on family farms and ranches, Farm Bureau launched the Farm Dog of the Year contest several years ago – now a popular feature of the American Farm Bureau Convention.

The winner of the 2026 Farm Bureau Farm Dog of the Year award is Max, a 4-year-old Border Collie owned by Oklahoma Farm Bureau members John, Charla and Brynley Enns. AFBF, with support from Nestlé Purina PetCare, recognized Max as the winner, from among nearly 100 contenders. Max was selected by a team of judges.

Members of the public voted online to select the People's Choice Pup. Goose, owned by Kentucky Farm Bureau member Lindie Huffman, was named People's Choice Pup. Two other dogs were finalists for People's Choice Pup: Ruby Hope, owned by Indiana member Travis Burkhardt; and Bubbles, owned by Montana member Elena Hovland-Stuker.

"Farm dogs are more than workers, they're

family," said AFBF President Zippy Duvall. "While they assist with chores, they also offer the companionship that makes tough days a little easier. It has been a pleasure to partner with Purina for the eighth annual Farm Dog of the Year contest, showcasing the important role dogs play in everyday farm life."

Rounding up livestock, chasing off predators, opening gates, fetching or carrying tools/buckets and greeting visitors are among the many tasks performed by farm dogs. The contest celebrates the diverse ways farm dogs support farmers and ranchers.

Farm Dog of the Year Max's primary role is to herd beef cattle on the Enns' farm. His assistance is invaluable for John, who is disabled and uses a mobility scooter. Moving "momma cows" and their growing calves from pasture to pasture so they have access to nutritious, fresh grass is a recurring chore for John and Max.

"I can't image doing this without Max," John said. "Max is not only a working dog, he's great with the family." After a

long day of herding boisterous cattle on mostly hilly terrain, Max often accompanies John and Charla to pick daughter Brynley up from school. Balancing farming with a disability and family life while navigating today's challenging farm economy would test anyone. But John remains undeterred. "Together, we make things work," he said.

Purina, one of the nation's leading pet care companies, donated prizes for the contest again this year, which included \$5,000 in prize money, a trophy plate, a year's supply of Pro-Plan dog food and other Purina products for Max. The People's Choice Pup, Goose, receives a trophy plate, Purina products and a \$2,500 cash prize. Nestlé has been helping dogs and cats live longer, healthier lives through scientifically based nutritional innovations for 130 years.

"Purina is proud to continue partnering with the American Farm Bureau to celebrate the essential role of farm dogs like Max," said Jack Scott, vice president of sustainable sourcing at

photo credit: American Farm Bureau photo, BigFoot Media

Nestlé Purina PetCare. "These remarkable dogs are invaluable partners in agriculture, and through the Farm Dog of the Year award, we're honored to recognize their contributions and the bond that makes pets and people better together."

Charitable Donation
Again this year, as part of the Farm Dog of the Year program, AFBF will donate \$1,500 to P.H.A.R.M. Dog USA, which trains and places farm dogs with farmers

living with physical, cognitive or illness-related disabilities. The donation will be made in honor of Max and Goose.

About Nestlé Purina PetCare Company

Nestlé Purina PetCare creates richer lives for pets and the people who love them. Founded in 1894, Purina has helped dogs and cats live longer, healthier lives by offering scientifically based nutritional innovations. Purina manufactures some of the world's most

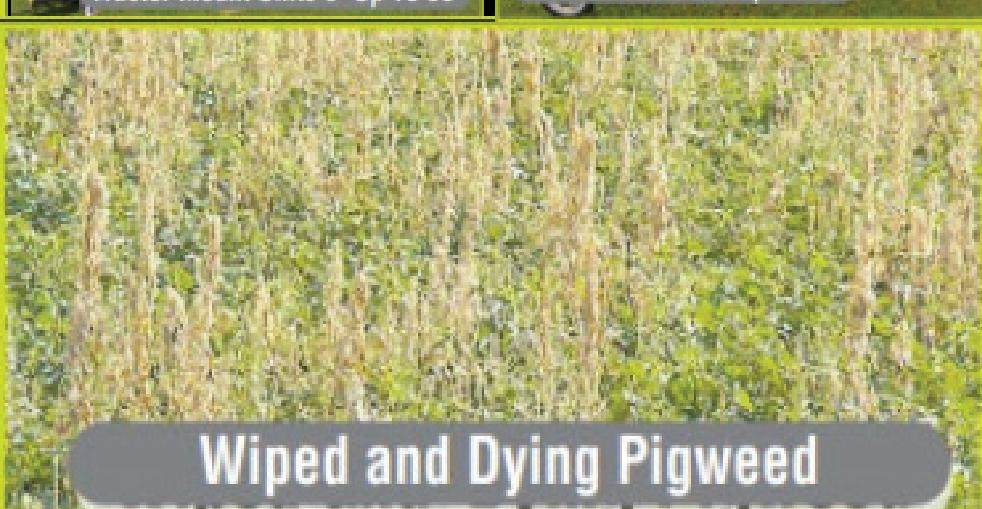

trusted and popular pet care products, including Purina ONE, Pro Plan, Friskies and Tidy Cats. Our more than 11,000 U.S. associates take pride in our trusted pet food, treat and litter brands that feed 46 million dogs and 68 million cats every year. Nearly 500 Purina scientists, veterinarians, and pet care experts ensure our commitment to unsurpassed quality and nutrition. Over the past five years, Purina has contributed more than \$150 million towards organizations that bring, and keep, people and pets together, as well as those that help our communities and environment thrive. Purina is part of Nestlé, a global leader in Nutrition, Health and Wellness.

About American Farm Bureau Federation

The American Farm Bureau Federation is the Voice of Agriculture. We are farm and ranch families working together to build a sustainable future of safe and abundant food, fiber and renewable fuel for our nation and the world.

UTM sophomore receives AMVAC scholarship for ag students

MARTIN, Tenn. — Hannah Fowler, a University of Tennessee at Martin sophomore agribusiness major from Atwood, is one of seven students nationwide to receive the 2025 Southern Agriculture Industry Advancement Scholarship from AMVAC, an American Vanguard company that specializes in the development, manufacturing and marketing of products for agricultural use.

Fowler has a concentration in farm and ranch management. The other students receiving the scholarship are Jessie Adams of the University of Georgia Tifton Campus, Rhet Bexley of the University of Arkansas, Delaney Brown of Texas A&M University, William Cordell of the University of Florida, Navdeep Godara of Virginia Tech University and Sadie

HANNAH FOWLER — Hannah Fowler, a sophomore agribusiness major from Atwood, was one of seven students nationwide to receive the 2025 Southern Agriculture Industry Advancement Scholarship from AMVAC.

Morris of Mississippi State University.

Each recipient will be awarded a \$2,000 scholarship to help them continue their educational and professional pursuits

in the agriculture industry. These students' fields of interest vary widely across the industry, including agribusiness, crop science, plant

breeding and weed science.

"Agriculture has always been a part of my life," Fowler told AMVAC. "Growing up on a row crop farm taught me where it all begins, and studying agribusiness lets me give back and make an impact. I'm so grateful to be chosen for this scholarship."

To be eligible for the scholarship, applicants needed a nomination from a consultant or professor and experience studying agriculture or working in the industry between 2023 and 2025. The scholarship was open to seniors in high school or students enrolled in an agriculture program at an accredited college or university.

The announcement was made by AMVAC on Dec. 8.

For more information about agriculture studies at UT Martin, visit www.utm.edu/caas or call the College of Agriculture and Applied Sciences at 731-881-7250.

For more information about UT Martin, visit www.utm.edu or call 1-800-829-UTM1 (-8861).

USDA Farmer Bridge Assistance Payments fall short for soybean farmers

to guarantee the long-term success of the U.S. soybean industry. We urge the Trump administration to focus on immediate, achievable actions which will support domestic soybean markets, including finalizing policies that create a preference for soy-based biofuel feedstocks through the 2026-2027 Renewable Volume Obligations, robust biomass-based diesel volumes, and 45Z Clean Fuel Production Credit tax guidance. Reliable markets depend on policies that grow demand, strengthen rural economies, and provide certainty for the next generation."

ASA urges the administration to deliver long-term demand solutions by finalizing strong biofuels policy.

Finalizing EPA's biofuel blending requirements as proposed, including the RIN credit discount for imported biofuel feedstocks that undercut domestic soybean demand, would prioritize American-grown feedstocks, support domestic energy production, and strengthen demand for U.S. soybean oil. Further, the swift finalization of 45Z tax guidance to ensure the positive changes created through One Big Beautiful Bill Act can be realized, is imperative to support biofuel industry investments. Putting these policies in place now will help ensure today's assistance is paired with lasting market opportunity for soybean farmers and rural communities.

Callicrate Banders

COMPRESSION ANALGESIA

Callicrate Banders deliver a high-tension, drug-free solution that ensures precise tension for complete blood flow ligation and effective pain suppression.

No other banding method compares to their effectiveness.

"The bottom line is that high-tension banding is faster, easier, and less traumatic for the animal than surgical castration."

Matt Sween, UC Davis, Animal Science Department

Castration Made Easy!

The Power of Delayed Castration

Research has shown that bull calves gain and develop faster and more efficiently than steer calves castrated soon after birth. This approach avoids the use of synthetic hormone implants, qualifying cattle for the premium natural beef programs.

Surgical castration of bull calves and yearlings causes stress from blood loss and physical changes to the body. With Callicrate Banders, stress is reduced.
